The twenty-nine articles explore the issue of WMD and key questions raised about terrorism, its definition, objects, motivation, whether there is a different species of it emerging in the aftermath of the close of the Cold War, preparedness and the means of prevention. The conventional, low-technology terrorism of the past has exercised a social and political impact far out of proportion with the casualties it has caused. The massive, indiscriminate destruction caused by an act of WMD terrorism similarly would have disproportionate social, political, economic and strategic effects.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls

and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific

examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Cesari argues that both religious and national communities are defined by the three Bs: belief, behaviour and belonging. By focusing on the ways in which these three Bs intersect, overlap or clash, she identifies the patterns of the politicization of religion, and vice versa, in any given context. Her approach has four advantages: firstly, it combines an exploration of institutional and ideational changes across time, which are usually separated by disciplinary boundaries. Secondly, it illustrates the heuristic value of combining qualitative and quantitative methods by statistically testing the validity of the patterns identified in the qualitative historical phase of the research. Thirdly, it avoids reducing religion to beliefs by investigating the significance of the institution-ideas connections, and fourthly, it broadens the political approach beyond state-religion relations to take into account actions and ideas conveyed in other arenas such as education, welfare, and culture.

The study of flight dynamics requires a thorough understanding of the theory of the stability and control of aircraft, an appreciation of flight control systems and a grounding in the theory of automatic control. *Flight Dynamics Principles* is a student focused text and provides easy access to all three topics in an integrated modern systems context. Written for those coming to the subject for the first time, the book provides a secure foundation from which to move on to more advanced topics such as, non-linear flight dynamics, flight simulation, handling qualities and advanced flight control. About the author: After graduating Michael Cook joined Elliott Flight Automation as a Systems Engineer and contributed flight control systems design to several major projects. Later he joined the College of Aeronautics to research and teach flight dynamics, experimental flight mechanics and flight control. Previously leader of the Dynamics, Simulation and Control Research Group he is now retired and continues to provide part

time support. In 2003 the Group was recognised as the Preferred Academic Capability Partner for Flight Dynamics by BAE SYSTEMS and in 2007 he received a Chairman's Bronze award for his contribution to a joint UAV research programme. New to this edition: Additional examples to illustrate the application of computational procedures using tools such as MATLAB®, MathCad® and Program CC®. Improved compatibility with, and more expansive coverage of the North American notational style.
