Reduce the time it takes to get up to speed with Lambda from weeks to an afternoon. This technical manual shows you everything you need to successfully develop and deploy AWS Lambda functions written in Javascript. It covers all necessary topics in one place, complete with code examples and linked projects. The AWS documentation pages are a great place to

learn about services, but they are also filled with things that are not relevant, making it hard to get the big picture. This book has all the important parts, based on experience and a lot of trial-and-error. You'll know everything you need in a fraction of time. No fluff or filler text, but plenty of hands-on examples. You'll: * Understand how the Lambda execution environment works * Learn how to write Javascript serverless functions * And walk away with knowledge about debuggers and HTTP APIs I'm an AWS certified security specialist and architect and I've been working with cloud environments for several years now. I've been writing about these topics since 2014 on my blog. With over 150 articles (and counting!), my writing is characterized by the depth of research and a to-the-point style. Who is this book for? Software developers who are familiar with Javascript and have some experience with the AWS cloud. The infrastructure examples are in Terraform, so it's nice to have some prior knowledge of that too. This handy guide book has been designed for the candidates who want to earn AWS Solutions Architect Associate Exam. This guide contains more than 200 high quality latest AWS solutions architect practice questions with new syllabus. The book has been divided in to two major parts: first part covers the real exam look-like practice questions along with detailed explanation of correct answers, incorrect answers, and the accurate reference links to validate the answers. The reference links are really helpful and recommended to visit at least once before to appear in the exam. It will help you to cover the overview of all the major topics. The second part contains more than 50 practice questions that you have to complete without correct answer hints and reference links. However, at the last, the answer sheet is mentioned to self-check and test your knowledge, strong and weak areas where you have to focus before to appear in the global exam. Here are few sample exam questions: 1. You need to run a job on an EC2 instance. Application deployed reads the data from S3 storage, perform the compute related operations, and then saves the results in S3 storage again. The application is designed in such a way that it could handle failures gracefully. There is no rush to complete the job. Which one of the instance types can be proved to be most cost-effective? A. On-demand instances B. Reserved instances C. Spot Instances D. A fleet of EC2 instances running behind an ELB

Rationale of answers Options A and B are incorrect:- On-demand EC2 instances should be used for the application that needs permanent and long-term data storage. Whereas, Reserved instances are used when your application is stable and does not require too many frequent changes/degrade/upgrade in resource capacities such as RAM or CPU. Hence, Option A and B both are incorrect answers. Option C is correct:- Spot instances should be used when your priority is cost saving and your application is acceptable to be interrupted. Hence, this is the correct answer. Option D is incorrect:- Fleet of EC2 instances should be used only when your application needs to be highly available, scalable, and durable. Hence, option D is the incorrect answer. Reference link: <https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-spot-instances.html>

2. You have been asked to configure a Route 53 routing policy for a Web application where Route 53 can respond to DNS queries with up to eight healthy records selected at random. Which one of following Route 53 routing policies should you use? A. Weighted routing policy B. Multivalue answer routing policy C. Latency-based routing policy D. Geolocation-based routing policy

Rationale of answers Option A is incorrect:- Weighted routing

policy routes traffic to multiple resources in proportions specified by you. Hence, this is an incorrect answer. Answer B is correct:-

Multivalued answer routing policy allows Route 53 to respond to DNS queries with up to eight healthy records selected at random. Hence this is the correct answer. Option C is incorrect:-

You should use the latency routing policy when you have resources in multiple AWS Regions and you want to route traffic to the region that provides the minimum latency. Hence this is an incorrect answer. Option D is incorrect:-

Geolocation routing policy routes traffic based on the location of your users.
