This casebook provides an applied perspective regarding school-based consultation, including an overview of mental health consultation, behavioral consultation, social learning theory consultation, Adlerian consultation, and ecological/organizational consultation. Along with relevant discussion of the issues in each case study, critical thinking questions are included for discussion among students and educators regarding school-based consultation. This text includes many more and diverse case examples than the competing casebooks available, and is designed to be used in conjunction with any of the established primary texts in Consultation. School-

Based mental health professionals, educators, and graduate students will find Theory and Cases in School-Based Consultation an indispensable guide in their work and study.

Organizations around the world are using Lean to redesign care and improve processes in a way that achieves and sustains meaningful results for patients, staff, physicians, and health systems.

Lean Hospitals, Third Edition explains how to use the Lean methodology and mindsets to improve safety, quality, access, and morale while reducing costs, increasing capacity, and strengthening the long-term bottom line. This updated edition of a Shingo Research Award recipient begins with an overview of Lean methods. It explains how Lean practices can help reduce various frustrations for caregivers, prevent delays and harm for patients, and improve the long-term health of your organization. The second edition of this book presented new material on identifying waste, A3 problem solving, engaging employees in continuous improvement, and strategy deployment. This third edition adds new sections on structured Lean problem solving methods (including Toyota Kata), Lean Design, and other topics. Additional examples, case studies, and explanations are also included throughout the book. Mark Graban is also the co-author, with Joe Swartz, of the book Healthcare Kaizen: Engaging Frontline Staff in Sustainable Continuous

Improvements, which is also a Shingo Research Award recipient. Mark and Joe also wrote The Executive's Guide to Healthcare Kaizen.

Typical undergraduate CS/CE majors have a practical orientation: they study computing because they like programming and are good at it. This book has strong appeal to this core student group. There is more than enough material for a semester-long course. The challenge for a course in programming language concepts is to help practical

ENGINEERING MECHANICS: STATICS, 4E, written by authors Andrew Pytel and Jaan Kiusalaas, provides readers with a solid understanding of statics without the overload of extraneous detail. The authors use their extensive teaching experience and first-hand knowledge to deliver a presentation that's ideally suited to the skills of today's learners. This edition clearly introduces critical concepts using features that connect real problems and examples with the fundamentals of engineering mechanics. Readers learn how to effectively analyze problems before substituting numbers into formulas -- a skill that will benefit them tremendously as they encounter real problems that do not always fit into standard

formulas. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Poetry. Latino/Latina Studies. "The astonishing range of fifty-three poetic voices, traditional native chants and popular corridos which are generously presented in bilingual format is rooted in a time and place that is both timeless and in constant flux. Baja Californians are a population on the move, alive to change, living on the edge, and the poetry in this lovingly-translated anthology conveys the feel of gritty towns and cities, burning deserts, lonely mountains, a huge sky still crowded with stars, the wind blowing in off the Pacific or the Sea of Cortes, the nearness of gray whales and pelicans, the uncertainties of isolation, the jittery rhythms of urban life, the United States forever looming on the other side of the border"--Homero Aridjis, noted Mexican poet and president of PEN International. These are the voices lost beneath the headlines of our contentious border. It should be of special interest for residents and students of the entire border, for Californians, for lovers of poetry of all kinds.

Now fully incorporated with SI units, these books teach students the basic mechanical behaviour of materials at rest (statics) and in motion (dynamics) while developing their mastery of engineering methods of analysing and solving problems.
Traditionally, books for the statics and dynamics courses require students simply to plug problem data into standardised

mathematical formulas and then compute an answer without thinking through the problem beforehand. Pytel and Kiusalaas reject this 'plug-and-chug' approach. In sample problems throughout the book, the authors direct students to identify the number of unknowns and independent equations in the problem before they attempt to calculate an answer. In this way, Pytel and Kiusalaas continually train students to think about how and why problems can be solved, by recognising up front whether a problem is statically determinate, or statically indeterminate. Pytel and Kiusalaas is the only textbook that continually reinforces students' ability to recognise determinacy and indeterminacy. Developing this ability in students is a priority for all instructors, especially in the statics course.
