first draft of history and blueprint for how we can move forward." —Ben Rhodes The COVID-19 pandemic killed millions, infected hundreds of millions, and laid bare the deep vulnerabilities and inequalities of our interconnected world. The accompanying economic crash was the worst since the Great Depression, with the International Monetary Fund estimating that it will cost over \$22 trillion in global wealth over the next few years. Over two decades of progress in reducing extreme poverty was erased,

<p>just in the space of a few months. Already fragile states in every corner of the globe were further hollowed out. The brewing clash between the United States and China boiled over and the worldwide contest between democracy and authoritarianism deepened. It was a truly global crisis necessitating a collective response—and yet international cooperation almost entirely broke down, with key world leaders hardly on speaking terms. Colin Kahl and Thomas Wright's <i>Aftershocks</i> offers a riveting and comprehensive</p>	<p>account of one of the strangest and most consequential years on record. Drawing on interviews with officials from around the world and extensive research, the authors tell the story of how nationalism and major power rivalries constrained the response to the worst pandemic in a century. They demonstrate the myriad ways in which the crisis exposed the limits of the old international order and how the reverberations from COVID-19 will be felt for years to come. It also provides extensive analysis of the crisis's varied impact on enterprises and workers. The report forecasts that employment recovery, though</p>

strong, will be insufficient to close the gaps. Workers whose labour market position was disadvantageous prior to the crisis - women, young people, migrants, informal workers and workers in lower-skilled occupations - suffered disproportionately. The report proposes a human-centred recovery strategy to avoid scarring of global labour markets for the years to come. Physician immigration is perhaps the most complicated area of U.S.

immigration law, but *The Physician Immigration Handbook*, 4th Edition, simplifies that process in a way that is easy to follow and understand. Updated annually, *The Handbook* explains what foreign physicians need to know to apply for graduate medical training at American teaching hospitals in the United States and how they can remain in the United States to pursue their careers. *The Physician Immigration Handbook* follows the typical

American journey for the international medical graduate (IMG). First, the *Handbook* reviews the application process through which physicians receive ECFMG certification, eventually leading to admittance to U.S. graduate medical training programs. Then it discusses the two major immigration pathways open to IMGs who want to come to the United States for graduate medical training: the J-1 visa and the H-1B visa. *The Handbook* walks the IMG through training to post-

training work, then on to permanent residency (the "green card" process) and ultimately to U.S. citizenship. It even delves into employment issues, such as layoffs, mergers, and acquisitions, while also discussing special benefits available to foreign physicians in the U.S. military. The Physician Immigration Handbook was written as a guide for IMGs, recruiters, human resource professionals, and even government officials who need

to know how the U.S. immigration system works and the special rules applied to physicians within that framework. The Handbook includes 24 chapters in an easy-to-follow, question-and-answer format: Qualifying for Graduate Medical Training in the United States The J-1 and the H-1B Visas Seeking a Visitor Visa to Pursue Graduate Medical Training J-1 Visas for Graduate Medical Training The J-1 Home-Residency Requirement Conrad 30

In a 2009 study of the debt collection industry, the Commission concluded that the “most significant change in the debt collection business

in recent years has been the advent and growth of debt buying.” “Debt buying” refers to the sale of debt by creditors or other debt owners to buyers that then attempt to collect the debt or sell it to other buyers. Debt buying can reduce the losses that creditors incur in providing credit, thereby allowing creditors to provide more credit at lower prices. Debt buying, however, also may raise significant consumer protection concerns. The FTC receives more consumer complaints about debt collectors, including debt buyers, than about

any other single industry. Many of these complaints appear to have their origins in the quantity and quality of information that collectors have about debts. In its 2009 study, the Commission expressed concern that debt collectors, including debt buyers, may have insufficient or inaccurate information when they collect on debts, which may result in collectors seeking to recover from the wrong consumer or recover the wrong amount. The FTC initiated this debt buyer study in late 2009 for two main purposes. First, the

FTC sought to obtain and enforcement a better understanding of the debt buying market and the process of buying and selling debt. Second, the Commission wanted to explore the nature and extent of the relationship, if any, between the practice of debt buying and the types of information problems that the FTC has found can occur when debt collectors seek to recover and verify debts. Many stakeholders recognize the concerns that have been raised about debt buying, including consumer groups, members of Congress, federal and state regulatory agencies, and the debt buyer industry itself. Indeed, the debt buyer industry has launched a self-regulatory effort to address some of these concerns, and the FTC is encouraged by that effort. This study of debt buyers is the first large-scale empirical assessment of the debt buying sector of the collection industry. The FTC hopes that its findings contribute to a greater understanding of debt buying, enhance ongoing reform efforts, and prompt further study of the industry. To conduct its study, the Commission obtained information about debts and debt buying practices from nine of the largest debt buyers that collectively bought 76.1% of the debt sold in 2008, with six of these debt buyers providing the information the Commission used in most of its analysis. The FTC also considered its prior enforcement and policy work related to debt collection, as well as available research concerning debt buying. The study focused on large debt buyers because they account for most of the debt purchased; it did not address the practices of smaller debt buyers that are

a frequent source of consumer protection concerns, a limitation that must be considered in evaluating the study's findings. The Commission acquired and analyzed an unprecedented amount of data from the studied debt buyers, which submitted data on more than 5,000 portfolios, containing nearly 90 million consumer accounts, purchased during the three-year study period. These accounts had a face value of \$143 billion, and the debt buyers spent nearly \$6.5 billion to acquire them. Most portfolios for which debt buyers

submitted data were credit card debt, with such debt accounting for 62% of all portfolios and 71% of the total amount that the buyers spent to acquire debts. In addition to these data, the debt buyers provided copies of many purchase and sale agreements between themselves and sellers of debts. The debt buyers also submitted narrative responses to questions concerning their companies and their practices, as well as the debt buying industry. The key findings of the study are as follows:

Lauded for its easy-to-understand, conversational

discussion of the fundamentals of mediation, moderation, and conditional process analysis, this book has been fully revised with 50% new content, including sections on working with multicategorical antecedent variables, the use of PROCESS version 3 for SPSS and SAS for model estimation, and annotated PROCESS v3 outputs. Using the principles of ordinary least squares regression, Andrew F. Hayes carefully explains procedures for testing hypotheses about the conditions under and the mechanisms by which causal effects operate, as well as the moderation of such mechanisms. Hayes shows how to estimate and interpret

direct, indirect, and conditional effects; probe and visualize interactions; test questions about moderated mediation; and report different types of analyses. Data for all the examples are available on the companion website (www.afhayes.com), along with links to download PROCESS. New to This Edition *Chapters on using each type of analysis with multicategorical antecedent variables. *Example analyses using PROCESS v3, with annotated outputs throughout the book. *More tips and advice, including new or revised discussions of formally testing moderation of a mechanism using the index of moderated mediation; effect size

in mediation analysis; comparing conditional effects in models with more than one moderator? using R code for visualizing interactions; distinguishing between testing interaction and probing it; and more. *Rewritten Appendix A, which provides the only documentation of PROCESS v3, including 13 new preprogrammed models that combine moderation with serial mediation or parallel and serial mediation. *Appendix B, describing how to create customized models in PROCESS v3 or edit preprogrammed models.
