MODELS2008 was the 11th edition of the series of conferences on Model-Driven Engineering Languages and Systems. The conference was held in Toulouse, France, during the week of September 28 to October 3, 2008. The local arrangements were provided by the Institut de Recherche en

Informatique de Toulouse (IRIT). The conference program included three keynote presentations, technical - per presentations, two panels, and several workshops and tutorials. The invited keynote speakers were Don Batory (University of Texas, USA), Je? Kramer (Imperial College London, UK), and Patrick Rauhut (Airbus, Germany). This volume contains the final version of the papers accepted for presentation at the conference. The papers cover a wider range of topics from the field including model transformation, model management, domain-specific modeling, modeling language semantics, model analysis, and applications. We received a record number of 271 full paper submissions from 40 different countries. Of these, 43 papers were submitted by authors from more than one country. The top three countries submitting papers were France (40), Germany (38), and Canada (24). A total of 58 papers were accepted for inclusion in the proceedings. The acceptance rate was therefore 21%, which is somewhat lower than those of the previous MODELS conferences. At least three Program Committee or Expert Reviewer Panel members - viewed each paper. Reviewing was thorough, and most authors received detailed comments on their submissions. Conflicts of interest were taken very seriously. No-one participated in any way in the decision process of any paper where a conflict of interest was identified. In particular, PC members who submitted papers did not have access to information concerning the reviews of their papers.

One of the most popular introductory texts
in its field, Statistics for Technology: A
Course in Applied Studies presents the range
of statistical methods commonly used in
science, social science, and engineering. The
mathematics are simple and straightforward;
statistical concepts are explained carefully;
and real-life (rather than contrived) examples
are used throughout the chapters. Divided
into three parts, the Introduction describes
some simple methods of summarizing data.

Theory examines the basic concepts and
theory of statistics. Applications covers the
planning and procedures of experiments,
quality control, and life testing. Revised
throughout, this Third Edition places a higher
priority on the role of computers in analysis,
and many new references have been
incorporated. A new appendix describes
general methods of tackling statistical
problems, including guidance on literature
searching and report writing.

This is a completely new and revised edition of the
General Aviation Handbook, long overdue since it
has been over 10 years since the last edition was
published. This edition is fully revised and updated
and contains 10 years worth of updated material,
including the addition of a number of manufacturers
and aircraft which were omitted from earlier editions
for various reasons. Aircraft new to this edition
include the so-called "heavy microlights", which are
now an important part of the worldwide light aircraft
scene. About 90 percent of the photos are new, and
larger page size provides greater space for large data
tables and photos. Previous editions have been

strong sellers; this is the main reference book on this important sector of the aviation world, and this new edition will be welcomed by both aviation enthusiasts and those involved in the aviation industry.
