A must-have reference for the entire NICU, Goldsmith's Assisted Ventilation of the Neonate, 7th Edition, is the only fully comprehensive, evidence-based guide to all aspects of this fast-changing field. Easy to use and multidisciplinary in scope, this trusted reference provides authoritative guidance on contemporary management of neonatal respiratory diseases, with an emphasis on evidence-based pharmacologic and technologic advances that improve outcomes and quality of life in newborns. It's an outstanding resource for neonatologists and NICU professionals to acquire new knowledge and techniques in this critical area of neonatal care. Covers all aspects of both basic and advanced respiratory management of neonates: general principles and concepts; assessment, diagnosis and monitoring methods; therapeutic respiratory interventions; adjunctive interventions; and special situations and outcomes. Provides

updated content on rapidly changing technology and guidelines for assisted ventilation, with up-to-date descriptions of bedside methodologies and the rationale for providing all types of ventilator care in infants. Contains new chapters on respiratory gas conditioning, diagnosis and management of PPHN, care of the infant with CDH, gaps in knowledge, and future directions. Includes significant updates on cardiovascular assessment and management, as well as complications of respiratory support. Provides extensive, full-color visual support with photographs, drawings, charts and diagrams, and radiographic images throughout. Features more than 30 appendices that help you quickly find normal values, assessment charts, ICU flow charts, procedure steps and other useful, printable forms.

Applying mechanical ventilation principles to patient care, *Pilbeam's Mechanical Ventilation: Physiological and Clinical Applications*, 5th Edition helps you provide safe, appropriate, and compassionate care for patients requiring ventilatory support. A focus on

evidence-based practice includes the latest techniques and equipment, with complex ventilator principles simplified for optimal learning. This edition adds new case studies and new chapters on ventilator-associated pneumonia and on neonatal and pediatric mechanical ventilation. Starting with the most fundamental concepts and building to the most advanced, expert educator J. M. Cairo presents clear, comprehensive, up-to-date coverage of the rapidly evolving field of mechanical ventilation. Excerpts of Clinical Practice Guidelines developed by the AARC (American Association for Respiratory Care) make it easy to access important information regarding indications/contraindications, hazards and complications, assessment of need, assessment of outcome, and monitoring. Case Studies with exercises and Critical Care Concepts address situations that may be encountered during mechanical ventilation. Learning objectives at the beginning of each chapter help in accurately gauging your comprehension and measuring your progress. Chapter outlines show the "big picture" of each chapter's content. Key terms are listed in the chapter opener, then bolded and defined at their first mention in the text. Key Point boxes highlight need-to-know information. NBRC exam-style assessment questions at the end of each chapter offer practice for the certification exam. NEW Neonatal and Pediatric Mechanical Ventilation chapter covers the latest advances and research relating to young patients. Additional case studies in each chapter present "real-life" scenarios, showing the

practical application of newly acquired skills. End-of-chapter summaries help with review and in assessing your comprehension with a bulleted list of key content.

With the in-depth coverage you need, this text helps you provide quality treatment for neonates, infants and pediatric patients. It discusses the principles of neonatal and pediatric respiratory care while emphasizing clinical application. Not only is this edition updated with the latest advances in perinatal and pediatric medicine, but it adds a new chapter on pediatric thoracic trauma plus new user-friendly features to simplify learning. A comprehensive approach covers all of the major topics of respiratory care for neonates, infants and children, including both theory and application. Exam preparation is enhanced by the inclusion of the content in the exam matrix for the NBRC's neonatal/pediatric specialty exam. A streamlined, logical organization makes it easy to build a solid foundation of knowledge. Unique Pediatric Thoracic Trauma chapter focuses on common forms of thoracic trauma, a condition that accounts for 5-10% of admissions to pediatric trauma centers. Learning objectives at the beginning of each chapter highlight what you should learn by breaking down key content into measurable

behaviors, criteria, and conditions. Assessment questions in each chapter are written in the NBRC multiple-choice style as found on the neonatal and pediatric specialty exam, with answers, page references, and rationales available on a companion Evolve website. Case studies help you master the more difficult areas of care for neonatal and pediatric disorders. New learning features and a fresh look make this text easier to study and use. A companion Evolve website includes links to related sites for further research and study.
