Differences Between Bacteria and Viruses

Viruses are much smaller than bacteria and are not considered living organisms. They are infectious agents with only a protein shell and a strand of RNA or DNA, depending on the type of virus. They do not reproduce on their own—like bacteria do. Instead, viruses need a host cell to do the

reproducing for them (you 'll learn more about that below.)

Bacteria And Viruses Answers

A. a lysogenic virus infecting the living cells of the tooth. B. bacteria feeding on the sugar in the mouth and producing acid. C. an excess of vitamin K production by mouth bacteria. D. nitrogen-fixing bacteria releasing ammonia that is eroding the tooth enamel.

BACTERIA AND VIRUSES • A Biology*
BACTERIA is -- microscopic life form: a single-celled, often parasitic microorganism without distinct nuclei or organized cell

structures. Various species are responsible for decay, fermentation, nitrogen fixation, and many plant and animal diseases while VIRUS is submicroscopic entity: a minute particle that lives as a parasite in plants, animals, and bacteria and consists of a nucleic acid ...

~~Bacteria and viruses – What's the difference?~~

~~Bacteria and viruses – What is the difference between bacteria~~

Viruses are not living organisms, bacteria are.

Viruses only grow and reproduce inside of the host cells they infect. When found outside of these living cells, viruses are dormant. Their “ life ” therefore requires the hijacking of the biochemical activities of a living cell.

Virus And Bacteria With Answer Sheets

Worksheets - Kiddy Math

Answer From Pritish K. Tosh, M.D. As you might think, bacterial infections are caused by bacteria, and viral infections are

caused by viruses.

Perhaps the most important distinction between bacteria and viruses is that antibiotic drugs usually kill bacteria, but they aren't effective against viruses.

Bacteria and Viruses | Glencoe Biology | Numera...

Bacteria and viruses provide medical significance to all life forms especially in humans. Bacteria present what other animals possessed, and that is the "cellular"

characteristic. Most of the scientist won't consider viruses as "microorganisms" for a very simple reason that they are acellular or therefore nonliving in nature just like the viroids and prions.
