BACTERIA AND VIRUSES • A* Biology

Viruses are much smaller than bacteria and are not considered living organisms. They are infectious agents with only a protein shell and a strand of RNA or DNA, depending on the type of virus. They do not reproduce on their own—like bacteria do. Instead, viruses need a host cell to do the reproducing for them (you'll learn more about that below.)

Differences Between Bacteria and Viruses

Bacteria and viruses provide medical significance to all life forms especially in humans. Bacteria present what other animals possessed, and that is the "cellular" characteristic. Most of the scientist won't consider viruses as "microorganisms" for a very simple reason that they are acellular or therefore nonliving in nature just like the viroids and prions.
