Virus And Bacteria With Answer Sheets Worksheets - Kiddy Math

Answer From Pritish K. Tosh, M.D. As you might think, bacterial infections are caused by bacteria, and viral infections are caused by viruses. Perhaps the most important distinction between bacteria and viruses is that antibiotic drugs usually kill bacteria, but they aren't effective against viruses.

A. a lysogenic virus infecting the living cells of the tooth. B. bacteria feeding on the sugar in the mouth and producing acid. C. an excess of vitamin K production by mouth bacteria. D. nitrogen-fixing bacteria releasing ammonia that is eroding the tooth enamel.

Bacteria and viruses? | Yahoo Answers

Viruses are much smaller than bacteria and are not considered living organisms. They are infectious agents with only a protein shell and a strand of RNA or DNA, depending on the type of virus. They do not reproduce on their own—like bacteria do. Instead, viruses need a host cell to do the reproducing for them (you'll learn more about that below.)

Answers to Common Questions About How Viruses Work - Ask ...

BACTERIA AND VIRUSES Infectious diseases are mostly caused by bacteria and viruses. Bacteria: Useful bacteria are found on the skin and in the digestive tract Prokaryotic cellular structure, single celled organelles Prokaryotic cells store carbon compounds in the form of glycogen and lipids.

Virus vs. Bacteria: What is the Difference? | Merriam-Webster

Bacteria and viruses provide medical significance to all life forms especially in humans. Bacteria present what other animals possessed, and that is the "cellular" characteristic. Most of the scientist won't consider viruses as "microorganisms" for a very simple reason that they are acellular or therefore nonliving in nature just like the viroids and prions.
