There are a lot of different
bad reactions to
antibiotics. One of the
possibilities is having the

normal flora of your gut messed up. This would normally happen after you had taken antibiotics for quite a while, probably at least a week. This is the reaction that taking probiotics helps.

Case Study Interview

Examples: Questions and Answers

This article uses the case-study methodology as a strategy to facilitate examination of ethical principles that underlie developmental risk research carried out among adolescents.

Bad Reaction Case Study Answers

Keep in mind the other confounding factors that may influence the comparison of rates of adverse events. A confounding factor is anything that is coincidentally associated

with an event (in this case, an AEFI), which may mislead the investigator into wrongly concluding that the factor is influencing the rate of an adverse vaccine reaction.

ANATOMY / PHYSIOLOGY
