In the first bilingual work on the reptiles and amphibians of the US – Mexico border, top herpetologists come together to describe the herpetofauna of the states of this region, which includes more than 600 species of toads, frogs, salamanders, turtles, sea turtles, alligators, lizards, snakes, and sea snakes that are found along the almost 2,000-mile border between the two countries. Each chapter is devoted to one state—four in the US (California, Arizona, New Mexico, and Texas) and six in Mexico (Baja California, Sonora, Chihuahua, Coahuila, Nuevo Le ó n, and Tamaulipas)—with text in both English and Spanish. The chapters contain an introduction to the area, a review of the research, a sketch of the state ' s physiography, and a description of the species present as well as the pertinent conservation issues they face. A color photo gallery includes images of nearly all species. Almost 40 percent of the featured native species are shared between the US and Mexico, reminding us that animals depend on the integrity of natural landscapes and proving the need for a comprehensive, bilingual reference to help lead a shared effort in the

management and conservation of the borderlands.

Bathed in desert light and shadow, rising up from the earth in improbable, faraway places, stand eight original Spanish missions on Mexico's Baja California peninsula. Built of stone by Roman Catholic priests and indigenous laborers in the eighteenth century, these stunning missions dominate the landscape around them. Baja California Missions: In the Footsteps of the Padres is a beautiful and informative book about the eight monumental Spanish colonial churches, buildings seldom seen by those familiar with the missions of California, Arizona, and Sonora, Mexico. With gorgeous photographs of the architecture and religious art, and supported by a concise history that outlines the peninsula's exploration and colonization by Roman

Catholic priests, Baja California Missions excels as a book of photography and history. It promises adventure for readers at home, as well as for travelers ready to explore the churches in person. The eight Spanish colonial stone churches of Baja California endure as the only intact originals of 34 missions built by the padres during the peninsula's colonization. Due to structural renovations and restorations of the artwork undertaken over the last 30 years, the renowned mission churches have become sources of pride to the citizens of Baja California. Travelers are invited to visit at any time, especially during patron saint day celebrations. As a guide, Baja California Missions is fully up to date, with directions for navigating Baja's paved highways and desert and mountain roads. The mission sites are pinpointed on a topographic roadmap of the peninsula. A church floor plan is provided to accompany a walk-through tour for each church interior. The lovely eighteenth-century oil paintings and wooden statues that grace the church altars are also identified and described.

*A Bird-Finding Guide to Mexico* Lulu Press, Inc  
The desert islands in the Sea of Cortez are little known except to a few intrepid tourists, sailors, and fishermen. Though at first glance these stark islands may appear barren, they are a refuge for an astounding variety of plants and animals. While many of the species are typical of the greater Sonoran Desert region, some are endemic or unique to one or two islands. For example, Isla Santa Catalina is home to the world's only rattlesnake that has lost its ability to grow a rattle. Other islands host nesting birds, such as Isla Rasa, a tiny, flat flow of basalt lava that attracts nearly half a million elegant and royal terns and Heermann's gulls each spring. The Desert Islands of Mexico's Sea of Cortez is one of the few books devoted to the biogeography of this remarkable part of the world. The book explores the geologic origin of the gulf and its islands, presents some of the basics of island biogeography, details insular life—including residents of the intertidal zone—and provides a brief outlook for preserving this area. More than a simple guidebook, Aitchison's writing will take both actual and armchair travelers through a gripping tale of natural history. Like the rest of our fragile planet, the Sea of Cortez and its islands are threatened by humans. Overfishing has eliminated or greatly diminished many fish stocks, and dams on rivers that once flowed into the gulf prevent certain

nutrients from reaching the sea. The tenuousness of this area makes the book's extraordinary photographs and the firsthand descriptions by a well-known teacher, writer, and photographer all the more compelling.

Univ of California Press

The stories featured in Baja California Adventures take place during a span of almost sixty years of travel in the rugged, parched, yet hauntingly attractive peninsula. The author kept detailed notes on most of his trips then fleshed out this skeleton in a narrative that places the reader in the role of participant in the adventure. Thus, one feels the bite of the 4WD tires into the desert sand, newly hard-packed by the moisture of a quick-moving thunderstorm. The author describes the excitement of finding Indian petroglyphs, arrowheads, or clay ollas in remote canyons. Because Mr. Tiscareo is also a pilot, many of the trips included here involve mention of the special immigration rules for private fly-in tourists. Finally, there are Baja adventures in the pine-clad granite fortress that is the Sierra de San Pedro Martir in the northern part of the peninsula. Here, the author joined other veteran Bajeros in hoof-and-boot or horse-assisted explorations. In short, this book should be inspiration to those readers who want to visit Baja

California, particularly the less tourist-trod destinations. Armchair travelers will derive vicarious pleasure without the effort of going there themselves.
