Many people have the need to take notes: interpreters, attorneys, health care providers, and students, among others. Some try to learn short-hand, a complex system which requires several months (even years) of practice to master. There is a widely unknown but simple alternative to take notes more clearly and efficiently. Jean Francois Rozan and Andrew Gillies, two pioneer conference interpreters, provide techniques to significantly streamline note-taking.

Although originally created for interpreters, these practical guidelines are extremely helpful to anyone who takes notes. The Note-Taking Manual will help you master note-taking symbols as well as Rozan and Gillies' techniques. You will acquire up to 40 new symbols through dictations (available as audio files at www.interpretrain.com). Each exercise offers a sample of notes to compare with your own and discover additional tips. These educational tools will help you become the best interpreter and/or note-taker you can be.

This book analyses the mobilisation of race, rights and the law in Malaysia. It examines the Indian community in Malaysia, a quiet minority which consists of the former Indian Tamil plantation labour community and the urban Indian middle-class. The first part of the book explores the role played by British colonial laws and policies during the British colonial period in Malaya, from the 1890s to 1956, in the construction of an Indian "race" in Malaya, the racialization of labour laws and policies and labour-based mobilisation culminated in the 1940s. The second part investigates the mobilisation trends of the Indian community from 1957 (at the onset of Independent Malaya) to 2018. It shows a gradual shift in the Indian community from a "quiet minority" into a mass mobilising collective or social movement, known as the Hindu Rights Action Force (HINDRAF), in 2007. The author shows that activist lawyers and Indian mobilisers played a crucial part in organizing a civil disobedience strategy of

framing grievances as political rights and using the law as a site of contention in order to claim legal rights through strategic litigation. Highly interdisciplinary in nature, this book will be of interest to scholars and researchers examining the role of the law and rights in areas such as sociolegal studies, law and society scholarship, law and the postcolonial, social movement studies, migration and labour studies, Asian law and Southeast Asian Studies.

This volume contains the proceedings of the International Symposium on Nonlinear Dynamics and Stochastic Mechanics held at The Fields Institute for Research in Mathematical Sciences from August September (1993) as part of the 1992-1993 Program Year on Dynamical Systems and Bifurcation Theory. In recent years, mathematicians and applied scientists have made significant progress in understanding and have developed powerful tools for the analysis of the complex behavior of deterministic and stochastic dynamical systems. By moving beyond classical perturbation methods to more general geometrical, computational, and analytical methods, this book is at the forefront in transferring these new mathematical ideas into engineering practice. This work presents the solutions of some specific problems in engineering structures and mechanics and demonstrates by explicit example these new methods of solution.
