A Federal Reserve insider pulls back the curtain on the secretive institution that controls America ' s economy After correctly predicting the housing crash of 2008 and quitting her high-ranking Wall Street job, Danielle DiMartino Booth was surprised to find herself recruited as an analyst at the Federal Reserve Bank of Dallas, one of the regional centers of our complicated and widely misunderstood Federal Reserve System. She was shocked to discover just how much tunnel vision, arrogance, liberal dogma, and abuse of power drove the core policies of the Fed. DiMartino Booth found a cabal of unelected academics who made

decisions without the slightest understanding of the real world, just a slavish devotion to their theoretical models. Over the next nine years, she and her boss, Richard Fisher, tried to speak up about the dangers of Fed policies such as quantitative easing and deeply depressed interest rates. But as she puts it, " In a world rendered unsafe by banks that were too big to fail, we came to understand that the Fed was simply too big to fight. " Now DiMartino Booth explains what really happened to our economy after the fateful date of December 8, 2008, when the Federal Open Market Committee approved a grand and unprecedented experiment: lowering interest rates to zero and flooding America with easy money. As she feared, millions of individuals, small businesses, and major corporations made rational choices that didn ' t line up with the Fed ' s " wealth effect " models. The result: eight years and counting of a sluggish " recovery " that barely feels like a recovery at all. While easy money has kept Wall Street and the wealthy afloat and thriving, Main Street isn ' t doing so well. Nearly half of men eighteen to thirty-four live with their parents, the highest level since the end of the Great Depression. Incomes are barely increasing for anyone not in the top ten percent of earners. And for those approaching or already in retirement, extremely low interest rates have caused their savings to stagnate. Millions have been left vulnerable and afraid. Perhaps worst of all, when the next financial crisis arrives, the Fed will have no tools left for managing the panic that ensues. And then what? DiMartino Booth pulls no punches in this expos é of the officials who run the Fed and the toxic culture they created. She blends her firsthand experiences with what she ' s learned from dozens of high-powered market players, reams of financial data, and Fed documents such as transcripts of FOMC meetings. Whether you ' ve been suspicious of the Fed for decades or barely know anything about it, as DiMartino Booth writes, " Every American must understand this extraordinarily powerful institution and how it affects his or her everyday life, and fight back. "

With M&As in the RIA space increasing, many firms are rapidly changing hands with little to no expert guidance on how to successfully execute a merger or acquisition. In 2017, a record number of M&A deals closed in the advisor space — 168 transactions, or a 22% growth over 2016. Aside from a fifth straight year of record highs in M&A activity, the size of the acquired firms has also increased, with average acquisitions involving wealth managers exceeding \$1.01

billion in assets under management. For many advisors, it only takes a handful of missteps during a merger or acquisition to jeopardize their business, but with so much unknown, advisors need a guidebook for success. A significant and often overlooked component to a successful RIA merger or acquisition is the thoughtful integration of technology. This comprehensive guide walks you through the steps of strategy, assessment, implementation, adoption and growth, all while considering how to best inspire and galvanize a firm ' s most valuable asset — its people. Combining the real-life experiences of a life-long financial advisor with the expertise of a 15-year operations director and founder of a large RIA ops network, this book takes real M&A experiences of the financial services industry and offers best practices, tools and resources to help advisors make smart decisions about technology integration that elevates the firm ' s goals and solidifies its future success.

Financial crises are recurring phenomena that result in the financial distress of systemically important banks, making it imperative to understand how to best respond to such crises and their consequences. Two policy responses became prominent for dealing with these distressed institutions since the last Global Financial Crisis: bailouts and bail-ins. The main questions surrounding these responses touch everyone: Are bailouts or bail-ins good for the financial system and the real economy? Is it essential to save distressed financial institutions by putting taxpayer money at risk in bailouts, or is it better to use private money in bail-ins instead? Are there better options, such as first lines of defense that help prevent such distress in the first place? Can countercyclical prudential and monetary policies lessen the likelihood and severity of the financial crises that often bring about this distress? Through careful analysis, authors Berger and Roman review and critically assess the extant theoretical and empirical research on many resolution approaches and tools. Placing special emphasis on lessons learned from

one of the biggest bailouts of all time, the Troubled Asset Relief Program (TARP), while also reviewing other programs and tools, TARP and Other Bank Bailouts and Bail-Ins around the World sheds light on how best to protect the financial system on Wall Street and the real economy on Main Street. - Presents a well-informed and rich account of bailouts, bail-ins, and other resolution approaches to resolve financially distressed banks. - Uses TARP as a key case study of bailouts that has been thoroughly researched. - Provides valuable research and policy guidance for dealing with future financial crises.
