"Why is it important to learn about higher education in international contexts? Why

learn about curriculum, teaching, and learning at Dubai Women's College of the Higher Colleges of Technology? Global education systems have remarkable contributions to make to understandings of 21st century curriculum, teaching, and learning. Adult educators across the globe are exploring how to make learning meaningful in a world that is experiencing change, global migration, rapid development, cross-cultural communication demands, and systems with mandates for accountability and international standardized measures of quality. Dubai is an Emirate in the United Arab Emirates that has experienced these issues, which have had a profound impact on higher education for Emirati women. The international educators who contributed to this book reveal how they designed and implemented a curriculum that represented a complex balancing act replete with recognition of local, global, religious, cultural, and societal implications. There is no other book like *The Balancing Act: International Higher Education in the 21st Century*. It reveals the nature of a highly devoted team of international educators who designed a

contextually and globally relevant transdisciplinary, 21st century curriculum. “Dr. Mary Gene Saudelli has tremendous knowledge and experience with delivering world class education in the Middle East. She has a deep commitment to progressive education and an understanding of global mindedness. It is wonderful that she shares her research on a wide range of topics in educational curriculum and global issues. In *The Balancing Act: International Higher Education in the 21st Century*, Dr. Saudelli opens the dialogue of reciprocity in learning from higher education in diverse contexts. This book honours Emirati women’s backgrounds and differences, yet cherishes the uniqueness of the international educators involved in this study.” – Kim Critchley, Dean and CEO, University of Calgary in Qatar"

ACT Math For Dummies John Wiley & Sons
Many parents and instructors find teaching math a monotonous and anxiety-producing process. That process is commonly compounded when the child is not responsive to certain modes of instruction that are comfortable to the parent and instructor. Questions abound: - I taught this many times; why did they fail the test? - Why do I have to teach math in this new way when it can be simplified? -

Why is my child telling me that s/he cannot "do it" this way? - How can s/he be telling me they do not know how to do this again? (etc.) Getting to the root problem of a struggling math student is a daunting and seemingly endless process. All child advocates alike encounter enormous frustrations during many hours of math instruction and meetings when it comes to a child who struggles. The solutions, though not immediate, are part of a gradual process that must begin with identifying gaps within the child's comprehension of math itself. This book is the culmination of thousands of hours conducting research, making observations, and implementing differentiated instructional strategies in order to generate a thorough understanding of mathematics. The simplistic style of writing empowers and rejuvenates the instructor by facilitating the identification of the root problems in today's struggling children. Math Sense makes it much easier to diagnose your child's specific mathematical issues and implement the strategies that specifically target your child's difficulties. All child advocates need their spirits uplifted and need to know that they are not alone. Math Sense brings a fresh perspective to your view of teaching math and assures that parents and instructors alike have ongoing support and tools to tackle the task!

The book provides an accumulation of articles, included in Focus on Mathematics Pedagogy and Content, a newsletter for teachers, published by Texas A&M University. Each article presents a discussion of a middle or high school mathematics topic. Many of the articles are written by

professors at Texas A&M University. The book is broken into three parts, with the first part focusing on content and pedagogy, related to the NCTM content strands of Number, Algebra, Geometry, Measurement, and Statistics and Probability. Articles include an in-depth presentation of mathematical content, as well as suggested instructional strategies. Thus, the integration of content knowledge and pedagogical knowledge is emphasized. The second and third parts apply to assessments, mathematical games, teaching tips, and technological applications. While other pedagogical reference books may provide an in-depth look at how to teach a topic, this book includes articles that also explain a topic, in great length. Thus, teachers may develop content knowledge first and then re-read each article, in order to learn appropriate instructional strategies to use. Many articles include technological applications, which are interspersed throughout the book. In addition, a special section, which includes helpful information, available tools, training sessions, and other references, for using technology in mathematics, is also presented.
