They may ride off into the sunset, but cowboys never go out of style. These manly men embody the fiercely independent, earthy alpha male and hero who isn't afraid to show the gentle, nurturing side of his complex nature when faced with a woman in need. Even when he's coated with dust from riding behind a herd of cattle or up to his knees in mud freeing a calf from a wallow, this stud still generates a lot of Cowboy Heat. Delilah Devlin's

I-Spy Aircraft America's Test Kitchen

For millions of years, humankind has used a brilliantly successful survival strategy. If we like

something, we chase after more of it: more status, more food, more info, more stuff. Then we chase again. Its how we survived famine, disease and disaster to colonise the world. But now, thanks to technology, weve suddenly got more of everything than we can ever use, enjoy or afford. That doesnt stop us from striving though and its making us sick, tired, overweight, angry and in debt. It burns up our personal ecologies and the planets ecology too. We urgently need to develop a sense of enough. Our culture keeps telling us that we dont yet have all we need to be happy, but in fact we need to nurture a new skill the ability to bask in the bounties all around us. ENOUGH explores how our Neolithic brain-wiring spurs us to build a world of overabundance that keeps us hooked on more. John explains how, through adopting the art of enoughness, we can break from this wrecking cycle. With ten chapters on

---

topics such as Enough food, Enough stuff, Enough hurry and Enough information, he explores how we created the problem and gives us practical ways to make our lives better.

**Evolving a Reflexive Mind by Interpreting Others** Penguin

Drawing on philosophical, psychological, and evolutionary perspectives, Bogdan analyzes how primates create the resources for "metamentation"—the ability of the mind to think about its own thoughts. Mental reflexivity, or metamentation—a mind thinking about its own thoughts—underpins reflexive consciousness, deliberation, self-evaluation, moral judgment, the ability to think ahead, and much more. Yet relatively little in philosophy or psychology has been written about what metamentation actually is, or about why and how it came about. In this book, Radu Bogdan

---

proposes that humans think reflexively because they interpret each other's minds in social contexts of cooperation, communication, education, politics, and so forth. As naive psychology, interpretation was naturally selected among primates as a battery of practical skills that preceded language and advanced thinking. Metamentation began as interpretation mentally rehearsed: through mental sharing of attitudes and information about items of common interest, interpretation conspired with mental rehearsal to develop metamentation. Drawing on philosophical, psychological, and evolutionary perspectives, Bogdan analyzes the main phylogenetic and ontogenetic stages through which primates' abilities to interpret other minds evolve and gradually create the opportunities and resources for metamentation. Contrary to prevailing

views, he concludes that metamentation benefits from, but is not a predetermined outcome of, logical abilities, language, and consciousness.

**Genetic Effects on Environmental Vulnerability to Disease** Altamira Press

Much research has attempted to show direct linear relations between genes and disorder. However, scientists have been discouraged by inconsistent findings based on this simple gene-phenotype approach. The alternative approach is to incorporate information about the environment. A gene-environment interaction approach assumes that environmental pathogens cause disorder, whereas genes influence susceptibility to environmental pathogens. This book brings together contributions from experts from multiple disciplines who discuss: How epidemiological cohort studies can better integrate physiological (mechanistic) measures; How best to characterise subjects' vulnerability versus resilience by moving

beyond single genetic polymorphisms; How gene hunters can benefit from recruiting samples selected for known exposures; How environmental pathogens can be used as tools for gene hunting; How to deal with potential spurious (statistical) interactions, and How genes can help explain fundamental demographic properties of disorders (e.g. sex distribution, age effects).

The evolution of a discipline at the intersection of physics, chemistry, and mathematics. Quantum chemistry—a discipline that is not quite physics, not quite chemistry, and not quite applied mathematics—emerged as a field of study in the 1920s. It was referred to by such terms as mathematical chemistry, subatomic theoretical chemistry, molecular quantum mechanics, and

chemical physics until the community agreed on the designation of quantum chemistry. In *Neither Physics Nor Chemistry*, Kostas Gavroglu and Ana Simões examine the evolution of quantum chemistry into an autonomous discipline, tracing its development from the publication of early papers in the 1920s to the dramatic changes brought about by the use of computers in the 1970s. The authors focus on the culture that emerged from the creative synthesis of the various traditions of chemistry, physics, and mathematics. They examine the concepts, practices, languages, and institutions of this new culture as well as the people who established it, from such pioneers as Walter Heitler and Fritz London, Linus Pauling, and Robert Sanderson Mulliken, to later figures including Charles Alfred Coulson, Raymond Daudel, and Per-Olov Löwdin. Throughout, the authors emphasize six themes: epistemic aspects and the dilemmas caused by multiple approaches; social issues, including academic politics, the impact of

---

textbooks, and the forging of alliances; the contingencies that arose at every stage of the developments in quantum chemistry; the changes in the field when computers were available to perform the extraordinarily cumbersome calculations required; issues in the philosophy of science; and different styles of reasoning.

**Western Romance for Women** MIT Press (Amadeus). The great baritone Leonard Warren was history's most notable interpreter of Verdi, making his mark in the title roles of Rigoletto , Macbeth and Simon Boccanegra . Warren's dramatic death over 40 years ago is famous: he collapsed and died onstage at the Met on March 4, 1960 in a performance as Carlo in La forza del destino . In this definitive biography, Mary Jane Phillips-Matz, author of an acclaimed biography of Giuseppe Verdi, offers an intimate portrait of a beloved opera star, based on hundreds of interviews. More than 100 rare

photographs capture Warren in his great roles as well as in private moments. HARDCOVER.

J.J. Pizzuto's Fabric Science Swatch Kit John Wiley & Sons

From the critically acclaimed author of *The Mercy of Thin Air* comes the profound story of a strong, resilient woman who risks everything to be true to herself, “an otherworldly tale that charts the all-too-human territory between heartbreak and hope” (Deborah Harkness, *New York Times* bestselling author of *A Discovery of Witches* and *Shadow of Night*). In an ancient time, in a faraway land, a young woman named Aoife is allowed a rare apprenticeship to

become her kingdom’s mapmaker, tasked with charting the entire domain. Traveling beyond its borders, she finds a secretive people who live in peace, among great wealth. They claim to protect a mythic treasure, one connected to the creation of the world. When Aoife reports their existence to her kingdom, the community is targeted as a threat. Aoife is exiled for treason and finds refuge among the very people who had been declared her enemy. With them, she begins a new life surrounded by kindness, equality, and cooperation. But within herself, Aoife has no peace. She cannot share the grief she feels for the home and children she left behind, nor can she bear the warrior scars of the man she comes to love. And when she gives birth to their gifted daughter, Aoife cannot avoid what the child forces her to confront about her past and its truth. On this most

*Minding Minds* Penguin

This book addresses sixteen different reform proposals that are urgently needed to correct the fault lines in the international tax system as it exists today, and which deprive both developing and developed countries of critical tax resources. It offers clear and concrete ideas on how the reforms can be achieved and why they are important for a more just and equitable global system to prevail. The key to reducing the tax gap and consequent human rights deficit in poor countries is global financial transparency. Such transparency is

essential to curbing illicit financial flows that drain less developed countries of capital and tax revenues, and are an impediment to sustainable development. A major break-through for financial transparency is now within reach. The policy reforms outlined in this book not only advance tax justice but also protect human rights by curtailing illegal activity and making available more resources for development. While the reforms are realistic they require both political and an informed and engaged civil society that can put pressure on governments and policy makers to act.
