USIM iLE adalah singkatan kepada intelligent Learning Environment. Textile Technology Digest ile The Covid-19 pandemic has changed our activities, like teaching, researching, and socializing. We are

confused because we haven't experienced before. However, as Earth's smartest inhabitants, we can adapt new ways to survive the pandemic without losing enthusiasm. Therefore, even in pandemic conditions, we can still have scientific discussions, even virtually. The main theme of this symposium is "Reinforcement of the Sustainable Development Goals Post Pandemic" as a part of the masterplan of United Nations for sustainable development goals in 2030. This symposium is attended by 348 presenters from

Indonesia, Malaysia, UK, Scotland, Thailand, Taiwan, Tanzania and Timor Leste which published 202 papers. Furthermore, we are delighted to introduce the proceedings of the 2nd Borobudur Symposium Borobudur on Humanities and Social Sciences 2020 (2nd BIS-HSS 2020). We hope our later discussion may result transfer of experiences and research findings from participants to others and from keynote speakers to participants. Also, we hope this event can create further research network.

With as many as 1 billion people now using online communities such as newsgroups, blogs, forums, social networking sites, podcasting, videocasting, photosharing communities, and virtual worlds, the internet is now an important site for research. This exciting new text is the first to explore the discipline of 'Netnography' - the conduct of ethnography over the internet - a method specifically designed to study cultures and communities online. For the first time, full procedural guidelines for the accurate and ethical conduct of

ethnographic research online are set out, with detailed, step-by-step guidance to thoroughly introduce, explain, and illustrate the method to students and researchers. The author also surveys the latest research on online cultures and communities, focusing on the methods used to study them, with examples focusing on the new elements and contingencies of the blogosphere (blogging), microblogging, videocasting, podcasting, social networking sites, virtual worlds and more. This book will be essential reading for researchers and students in social sciences such as anthropology, sociology, marketing and consumer

research, organization and management studies and cultural and media studies. **Foreign Operations, Export Financing, and Related Programs Appropriations for 2001** Focusing on the South Indian textiles and apparel industry, the August edition of Fibre2Fashion collates voices from a cross-section of industry segments. The other offering in the South India package—from Karur—is about a fantastic initiative that is slowly capturing the imagination of many in the industry. Challenges of spinning industry and their solutions, the world’s first denim institute, and other regular features are

also covered. Fibre2Fashion magazine—the print venture of Fibre2Fashion.com since 2011—is circulated among a carefully-chosen target audience globally, and reaches the desks of top management and decision-makers in the textiles, apparel and fashion industry. As one of India’s leading industry magazines for the entire textile value chain, Fibre2Fashion Magazine takes the reader beyond the mundane headlines, and analyses issues in-depth. **Fashion Design for Living EGC** Is it possible that all the knowledge of the universe is stored within us? Within in the

atoms, molecules and cells that becomes our physical living self and each living moment, molded in our genes and DNA? Are we then able to process our cellular memory and DNA automatically and unconsciously with our brain? In this century we have come to believe that it is possible and that there may be a way to "access" this universal knowledge through a lost system which perhaps the ancient wise men had developed and applied to answer the fundamental questions: "Who are we? What are we? Where do we come from?" I believe the

answer to further soul development lies between these pages. At least it is a step to knowing and accessing other worlds and universes, finding a way to have compassion, forgiveness, and finally to walk the path of balance, health, fulfillment, helping others, and embracing our differences without judgment. We can raise our consciousness to highest levels by developing an overall worldview, by embracing a world that transcends illusions. Doing this will overcome even the final hurdle of inner consciousness-its

first shock of separating and the split. This is the first duality of the whole of consciousness and manifests in our right/left hemisphere split. How do we transcend that highest of inner rifts? We do so by putting the wisdom of the right hemisphere, its connective consciousness, above the left-brain's lower separation consciousness. The former evolves from realizing, accessing, and opening our new spiritual chakras. The later evolves a purely mathematical, mechanical dominating

worldview. We really need to make accessing our higher self, our second consciousness, instead of the other way around. Then we can connect what is most separate and harness the mechanical Third Dimension reality for the benefit of our life and those around us. We grow and our consciousness expands as well as our spiritual gifts. Although this information has been with us all along, we are now able to, for the first time in eons, access these energies and apply them to ourselves by working with our Spiritual Chakras.

This is an invaluable gift for us, as well as for others. Perhaps we have found one of the answers to creating harmony within, leading to World Peace!

Routledge Fashion Design for Living explores the positive contribution that the contemporary fashion designer can make within society. The book seeks to reveal new ways of designing and making fashion garments and products that not only enhance and enrich our lives, but also are mindful of social and

sustainable issues. This book sets out to question and challenge the dominant, conventional process of fashion design that as a practice has been under-researched. While the fashion designer in industry is primarily concerned with the creation of the new seasonal collection, designed, produced and measured by economically driven factors, society increasingly expects the designer to make a positive contribution to our social, environmental and cultural life. Consequently an emergent set of designers and

research-based practitioners are beginning to explore new ways to think about fashion designing. The contributors within this book argue that fashion designing should move beyond developing garments that are just aesthetically pleasing or inexpensive, but also begin to consider and respond to the wearer's experiences, wellbeing, problems, desires and situations, and their engagement with and use of a garment. Fashion Design for Living champions new approaches to fashion practice by

uncovering a rich and diverse set of views and reflective experiences which explore the changing role of the fashion designer and inspire fresh, innovative and creative responses to fashion and the world we live in.
