I am not a recruiter. I am a software engineer. And as such, I

know what it's like to be asked to whip up brilliant algorithms on the spot, and then write flawless code on a whiteboard. I know because I've been asked to do the same thing--in interviews at Google, Microsoft, Apple, and Amazon, among other companies. According to the Last year and this year Data that we have collected from different sources, More than 5,67,000 students and IT professionals gone through this book and Successfully secured their jobs in IT industry and Other industries as well. I also know because I've been on the other side of the table, asking candidates to do this. I've combed through stacks of resumes to find the engineers who I thought might be able to actually pass these interviews. And I've debated in Google's Hiring Committee whether or not a candidate did well enough to merit an offer. I understand and have experienced the full hiring circle. And you, reader, are probably preparing for an interview, perhaps tomorrow, next week, or next year. You likely have or are working towards a Computer Science or related degree. I am not here to re-teach you the basics of what a binary search tree is, or how to traverse a linked list. You already know such things, and if not, there are plenty of other resources to learn them. This book is here to help you take your understanding of Computer Science fundamentals to the next level, to help you apply those fundamentals to crack the coding interview. This book will help you land software engineering jobs in the financial markets industry - Wallstreet, Hedge Funds, Exchanges, etc. About the Author: I am Dennis Thompson. I built trading systems for more than 10 years in multiple firms spanning investment banks, exchanges, algorithmic trading firms, etc. across multiple asset classes. I have been on both sides of the interview table many times so I could write this guide. Who this book is for: This book is written to help programmers wanting to get into the financial markets/trading industry as trading systems developers into firms operating in algorithmic trading, high-frequency trading, market-making, electronic trading, brokerages, exchanges, hedge funds, investment banks, proprietary trading firms, etc. in various asset classes such as equities, derivatives, FX, bonds, commodities, cryptocurrencies, etc. This book can serve as a quick interview prep guide for developers already working in this space when trying to change jobs. This book will serve programmers who already know C++ or willing to learn C++. Due to the level of performance expected from these systems, most trading systems are developed in C++. You can get into prestigious, high paying wall street tech jobs like these without any previous industry experience if you can improve your skills in the different areas mentioned in the book. Resources are provided. Practice questions and answers will help you understand the level and type of questions expected in the interview. This is an "Interview Guide ONLY". If you lack some skills required for these jobs, you can study by picking the books/sources provided in the resources section. Who this book is not for: This book is NOT suitable for quant and trader interviews. What does this book contain: Overview of the financial markets trading industry - types of firms, types of engineering jobs, work environment and culture, compensation, how to get job

interviews, etc. For every chapter mentioned below, a guideline of what kind of topics are asked in the interviews is mentioned. For every chapter mentioned below, many questions with full solutions/answers are provided that are at similar difficulty as real interviews, that will cover the topics in sufficient breadth and depth. C++ Multithreading Inter-Process Communication Network Programming Lockless Queues Low Latency Programming and Techniques Systems Design Design Patterns Coding Questions Math Puzzles Domain-Specific Tools Domain Knowledge Behavioral Questions Resources - a list of books for in-depth knowledge What does Trading Systems Developer do: They build different components of trading systems such as market data feed handler, matching engine, strategy execution engine, smart order router, signals computation engine, order management system, risk management system, pricing engine, price/volume forecasting engine, implementing trading strategies with help of quants and traders, etc. Due to the competitive nature of the firms operating in this space, low latency, high availability, high performance, handling high volumes of data efficiently, fault tolerance, reliability are the key characteristics of these systems. Upsides of working as Trading Systems Developer: Opportunity to work on cutting edge technologies Opportunity to work with quants, traders and financial engineers will expand your understanding of the financial markets both qualitatively and quantitatively Opportunity to work with other smart engineers as these firms tend to hire engineers with strong engineering caliber Top compensation with big base and bonus, comparable to FAANG companies Compared to general tech interviews, there is an emphasis on some other topics which I will provide in the book. This book will seriously cut down your interview

preparation time and gives you a huge advantage in landing the jobs.
