Humans are born to create theories about the world--unfortunately, they're usually wrong, and keep us from understanding the world as it really is. Why do we catch colds? What causes seasons to change? And if you fire a bullet from a gun and drop one from your hand, which bullet hits the ground first? In a pinch we almost always get these questions wrong. Worse, we regularly misconstrue fundamental qualities of the world around us. In *Scienceblind*, cognitive and developmental psychologist Andrew Shulman shows that the root of our misconceptions lies in the theories about the world we develop as children. They're not only wrong, they close our minds to ideas inconsistent with them, making us unable to learn science later in life. So how do we get the world right? We must dismantle our intuitive theories and rebuild our knowledge from its foundations. The reward won't just be a truer picture of the world, but clearer solutions to many controversies--around vaccines, climate change, or evolution--that plague our politics today.

Scienceblind Routledge
(Book). There's a huge amount of hype and mythology surrounding tube amplifiers in the guitar world. For years, experts have argued over the tiny details of exactly how they do what they do, and how their various components interact. What's undeniable is that, far more than being just a "loudness booster," the unique combination of tubes, capacitors, resistors, and transformers in these amps can contribute enormously to the quality of sound derived from any electric guitar. In this thorough and authoritative book, Dave Hunter cuts through the marketing hyperbole, and the blind faith, and supplies all the information you need to choose the right amp, and get the best from it. The book also features exclusively conducted, in-depth interviews with leading figures in the tube amp-building world including Ken Fischer, Mark Sampson, and Michael Zaitz and even provides full instructions on how to construct your own high-quality tube guitar amp from scratch.

Hepato-pancreato-biliary (HPB) surgery is now firmly established within the repertoire of modern general surgery. Indeed, in many major tertiary centres there are now specific teams for both pancreatic and liver surgery. However, in most hospitals outside these major centres the day-to-day management and decision-making for patients with these disorders remains the remit of the general surgeon and presents often highly complex clinical scenarios. *Surgical Management of Hepatobiliary and Pancreatic Disorders*, 2nd edition, is a detailed guide to management in problems arising from cancer, trauma, cysts and other conditions, both acute and chronic. It covers the spectrum of common HPB diseases that will confront the general surgeon in his or her regular practice. The chapters are problem-based, rather than didactic descriptions of pathology and surgical technique. It is sufficiently comprehensive to cover the broad spectrum of HPB surgery for candidates coming to examinations at the completion of surgical training and will act as a comprehensive reference tool for surgeons in practice and in training.
