Whether switching on the TV, picking up a newspaper or simply logging on to the internet, one is constantly faced with images of natural disasters, conflict and human suffering. Humanity has experienced these problems throughout time and we have evolved methods and mechanisms for alleviating suffering, from trauma care following a traffic accident to international pacts and the Millennium Development Goals. In exploring such diverse cases of aid intervention, *Disaster Medicine: A Case Based Approach* provides interesting, easily accessible content and context for understanding disaster medicine and global health. In each case the reader will be put in the position of the decision maker and as in real life some of the cases will portray success and some will show failure. It is hoped the reader will consider the issues and problems for themselves and perhaps consider things they would choose to do differently. Written by a team of experts with extensive experience in the field and a progressive perspective *Disaster Medicine: A Case Based Approach* is a valuable text for students and professionals of disaster medicine.

The provision of support for troops in Iraq and Afghanistan is made more difficult because they operate in remote locations and harsh conditions. Despite the challenging operational environments, the Ministry of Defence (MOD) has successfully delivered around 300,000 personnel and 90,000 tonnes of freight to Iraq and Afghanistan over the last two years. However, it has not consistently met its targets for delivering supplies in a timely fashion. The MOD is taking measures to improve the effectiveness of its

supply chain; and the amount of time a unit waits for items to be delivered has reduced by half in Afghanistan and a third in Iraq. 4.2 billion has been approved to upgrade or buy new equipment to meet urgent requirements in the two theatres. The NAO found that the availability of this equipment has generally met or exceeded targets, though there have been spares shortages with some fleets particularly when the vehicle is used for a different purpose than intended. The availability and serviceability of helicopters has exceeded MOD targets, although prioritisation of spare parts for operations has led to reduced availability in the UK. There are also shortages of equipment for Service personnel in the UK to train with, prior to deployment overseas. Accommodation, medical and welfare services to Service personnel on operations are generally satisfactory although provision at the smaller patrol bases is more basic. The helicopter borne Medical Emergency Response Teams provide quick, life-saving medical support to casualties and evacuate them speedily to hospital.

Orthopaedic Trauma in the Austere Environment Cambridge University Press

This book is designed to meet the continued need to re-learn the principles of treatment of complex war injuries to the extremities in order to minimize post-traumatic and post-treatment complications and optimize functional recovery. Most of the chapters are based on the unique experience gained in the treatment of military personnel who have suffered modern combat trauma and civilian victims of terror attacks at a single, large level 1 trauma center. The remaining chapters present the experience of leading international authorities in trauma and reconstructive surgery. A staged treatment protocol is presented, ranging from primary damage control through to definitive functional limb reconstruction. The organization of medical aid, anesthesiology, diagnostic imaging, infection prophylaxis, and management of complications are reviewed, and a special chapter is devoted to the challenging dilemma of limb salvage versus amputation in the treatment of limbs at risk.

Orthopaedic trauma represents 75% of the casualties in a disaster. Many of these patients will be cared for by international volunteers, but good intentions are not always matched by good preparation. This book explains how best to prepare for missions, how to deal with injuries in austere conditions, how to ensure a positive legacy, and the need for cultural, political, and legal awareness. All of the most common orthopaedic presentations encountered in the austere environment are covered. In addition to evidence-based research, cases and actual experiences from the authors' missions are included to illustrate and bring to life key points. This book, written by a team of international experts with extensive experience of challenging field missions, will be an ideal practical guide for volunteers and health care workers, helping them to deal with confusing, chaotic, and distressing situations with greater confidence and efficacy.

Published in association with the Society for Vascular Surgery (SVS), the newly updated edition of Rich 's *Vascular Trauma* draws on civilian and military authorities from around the world to offer comprehensive and up-to-date coverage of the management of vascular injury. Anatomic patterns of vascular trauma including extremity, torso and cervical injury are reviewed in detail, including the latest techniques to manage non-compressible torso hemorrhage. You ' ll have access to all of the current innovations across the broad spectrum of vascular trauma, presented in a well-organized fashion that allows you to quickly hone-in on the most important issues in patient care and management. Emphasizes the current management of civilian vascular injuries with an historical reflection of pioneering contributions from the battlefield. Combines the largest existing database of military vascular trauma with the experience of one of the nation's premier civilian trauma centers. Examines operative techniques and "damage control" for vascular traumas. For the first time, includes a novel International Perspectives section featuring fascinating accounts of vascular trauma from nine leading surgeons from five continents. This section focuses on innovative surgical treatments tailored to locally developed pathways

of care, training solutions, and regional injury patterns. End-to-end coverage of all phases of acute vascular injury care, including a new assessment of the implications of vascular trauma in the pre-hospital setting (i.e. point of injury and en-route care). Covers the emerging hot topics, including endovascular procedures to manage trauma, contemporary use of vascular shunts, and a modern reappraisal of resuscitative endovascular balloon occlusion of the aorta for shock. An innovative chapter on the systems approach and quality improvement in vascular trauma, offering information and tactics for all providers wishing to understand how clinical systems underpin patient outcome and recovery from this challenging injury pattern. A combined civilian and military authorship from internationally recognized authorities draws on the best available evidence, experience, and lessons-learned from Afghanistan, Iraq, and the "urban battlefield."
