This book explores the evolution of the banking sector and the financing tools it fosters, addressing the impact of new regulations and the ensuing opportunities for financial institutions, firms, and individuals. Written in two parts, the project includes papers presented at the 2019 Annual Conference of the Wolpertinger Club - The European Association of University Teachers in Banking and Finance. The first part addresses the impact of policy changes on banks and financial institutions, particularly the impact of recent changes in European policy. The authors explore how policy has been, and is, communicated and how it shapes new incentives and challenges for the banking sector and institutional and individual investors. The book touches upon the debate on the 'bail-in' vs 'bail-out' options and reviews new opportunities for investors on covered and subordinated bond markets in Europe, covering the new regulatory structure provided by the European authorities. The second part explores new financing tools besides the traditional banking sector available to firms and individuals, examining financing options for firms and individuals, and describing the role that alternative capital-market tools such as mini bonds and crowdfunding are playing within the landscape of SME financing. Arguing that financing decisions can ultimately affect the survival rate of startups, this edited collection will be valuable to those researching both finance and business, but particularly to those studying banking, financial institutions and entrepreneurial finance.

Forensic Investigation of Explosions, Second Edition Elsevier

A practical and technical handbook providing operators with a step-by-step description of how to perform some of the techniques involved in the procedures, and how to troubleshoot some of the problems along the way. Examples with pictures will be provided, along with live angiographies. At the end of each chapter, the author will be provided with 3 questions to answer. Those questions will be developed by the editor and the contributors. The idea is to provide a quick reference to the most current problems encountered with a specific issue developed in the chapter. Nowadays, the busy clinician is unlikely to exclusively rely on lengthy textbooks to learn specific complex techniques. That is one of the reasons for the popularity of CTO courses, live demonstrations, and conferences

and, there are consequently many courses offered around the world to help new operators in the field. CTO PCI has emerged as a very effective procedure to help patients with CTOs, with very high success and low complications rates. It is however a very challenging procedure with multiple pitfalls along the way to success, both in specific cases, but also in the learning process. There are currently no single reference or "one-stop shop" for the operator who wants to learn a given technique that he or she may have seen performed live in a dedicated proctorship event, or in a live demonstration, or to even troubleshoot a problem encountered in daily CTO PCI practice. This will be the first handbook formatted for the busy interventional cardiologist. This book will become a "must have" for operators who are practicing CTO PCI and who want a quick reference. However, it will also provide tips and tricks currently used in the field.
