This volume in the Swedish Studies in European Law series, produced by the Swedish Network for European Legal Studies, heralds the new harmonised regime of private enforcement of EU competition law. In 2013, the Commission issued a Communication and Practical Guide to the quantification of harm in antitrust litigation and a Recommendation on collective redress. In 2014, the long-awaited Directive on actions for damages for infringements of EU competition law was finally adopted. In 2016, the Commission is expected to issue guidelines on the passing-on of overcharges. This book examines these recent developments and offers the perspectives of judges, officials, practitioners and academics. With a preface by Judge Carl Wetter of the General Court, the book explores five different themes. In section one, the main policy issues and challenges are presented. In section two, the new regime is placed in the bigger picture of recent EU law developments. In section three, the nexus between private enforcement and transparency is investigated. A comparative perspective is offered in section four by looking into private enforcement in five Member State jurisdictions. Finally, issues relating to causation, harm and indirect purchasers are explored in section five.

*European Commission Decisions on Competition* provides a comprehensive economic classification and analysis of all European Commission decisions adopted pursuant to Articles 101, 102 and 106 of the FEU Treaty from 1962 to 2009. It also includes a sample of landmark European merger cases. The decisions are organised according to the principal economic theory applied in the case. For each economic category, the seminal Commission decision that became a reference point for that type of anticompetitive behaviour is described. For this, a fixed template format is used throughout the book. All subsequent decisions in which the same economic principle was applied are listed chronologically. It complements the most widely used textbooks in industrial organisation, competition economics and competition law, to which detailed references are offered. The book contains source material for teachers and students, scholars of competition law and economics, as well as practising competition lawyers and officials.

Issues such as the patentability of scientific ideas, the market for organs and open source software are hotly debated and yet poorly understood. In particular, there is a great need for sound economic theorizing on such issues. There is also a need for a clear and concise exposition of the state-of-the-art of the economics of property rights. This book fulfils these various needs.

Between Emma Peel and tire Ministry of Silly Walks British television

had a significant impact on American popular culture in the 1960s and 1970s. In *Something Completely Different*, Jeffrey Miller offers the first comprehensive study of British programming on American television, discussing why the American networks imported such series as *The Avengers* and *Monty Python's Flying Circus*; how American audiences received these uniquely British shows; and how the shows' success reshaped American television. Miller's lively analysis covers three genres: spy shows, costume dramas, and sketch comedies. In addition to his close readings of the series themselves, Miller considers the networks' packaging of the programs for American viewers and the influences that led to their acceptance, including the American television industry's search for new advertising revenue and the creation of PBS.

This book explores the wave of liberalization reforms experienced by OECD network industries. Focusing on the telecommunications sector, the authors analyze the latest data available on liberalization and privatization, and following a political economics approach, they integrate standard economic analysis with the most recent studies of the political determinants of market-oriented policies. The book presents new econometric evidence on several policy issues, including institutional complementarities dynamics, the problem of policy sequencing and the role of government political ideology. The detailed and comprehensive discussion offers insights into how so many countries adopting similar reforms actually differ in their policy "bundling", intensity and implementation of liberalization and privatization.
