What are living bodies made of? Protein

modelers tell us that our cells are composed of millions of proteins, intricately folded molecular structures on the scale of nanoparticles. Proteins twist and wriggle as they carry out the activities that keep cells alive. Figuring out how to make these unruly substances visible, tangible, and workable is a challenging task, one that is not readily automated, even by the fastest computers.

Natasha Myers explores what protein modelers must do to render three-dimensional, atomic-resolution models of these lively materials.

Rendering Life Molecular shows that

protein models are not just informed by scientific data: model building entangles a modeler ' s entire sensorium, and modelers must learn to feel their way through the data in order to interpret molecular forms. Myers takes us into protein modeling laboratories and classrooms, tracking how gesture, affect, imagination, and intuition shape practices of objectivity. Asking, ' What is life becoming in modelers' hands? ' she tunes into the ways they animate molecules through their moving bodies and other media. In the process she amplifies an otherwise muted liveliness inflecting

mechanistic accounts of the stuff of life.

Breakthroughs in science and technology increasingly happen outside of firms in informal interorganizational communities of innovators. The effort of a group on a specific topic across firms, expertise, and geography can function as an emergent organizational form, capable of great productivity. Using data from computer science, basic research, and management strategy to identify and study these intense clusters of innovators, or “ knowledge communities, ” this book illuminates the new organizational logics that govern such collective success.

Ministry Current Catalog Simon and Schuster The jurist and philosopher, Jeremy Bentham, and his lesser-known brother,

Samuel, equally talented but as a naval architect, engineer and inventor, had a long love affair with Russia. Jeremy hoped to assist Empress Catherine II with her legislative projects. Samuel went to St Petersburg to seek his fortune in 1780 and came back with the rank of Brigadier-General and the idea, famously publicised by Jeremy, of the Inspection-House or Panopticon. The Bentham Brothers and Russia chronicles the brothers ' later involvement with the Russian Empire, when Jeremy focused his legislative hopes on Catherine ' s grandson Emperor Alexander I (ruled 1801-25) and Samuel found a unique opportunity in 1806 to build a Panopticon in St Petersburg – the only panoptical building ever built by the Benthams themselves. Setting the Benthams ' projects within an in-depth portrayal of the

Russian context, Roger Bartlett illuminates an important facet of their later careers and offers insight into their world view and way of thought. He also contributes towards the history of legal codification in Russia, which reached a significant peak in 1830, and towards the demythologising of the Panopticon, made notorious by Michel Foucault: the St Petersburg building, still relatively unknown, is described here in detail on the basis of archival sources. The Bentham's interactions with Russia under Alexander I constituted a remarkable episode in Anglo-Russian relations; this book fills a significant gap in their history.

Among the many commonly discussed subjects – on love, religion, history and so on – there

are quite a few wherein conventional and traditional beliefs and views obscure the underlying reality. The general reader of this book will find the truths exposed in it both informative and interesting. Some readers, though, might find them disturbing especially if they wish to cling on to certain well-loved and pet beliefs inherited from tradition. As a contrast to pet beliefs the author has included in this book a chapter on science where pet beliefs have no place. In this chapter he has briefly outlined the steps taken by astronomers through the ages in determining the vastness of the Universe. This is the science of celestial metrology.
