More than 150 cases help develop the skills you need to identify and resolve the most common drug therapy problems The perfect study companion to DiPiro's Pharmacotherapy: A Pathophysiologic Approach More than 40 all-new cases! Pharmacotherapy Casebook: A Patient-Focused Approach delivers 157 patient cases designed to teach you how to apply the principles of pharmacotherapy to real-world clinical practice. The case chapters in this book are organized into organ system sections that correspond to those of the DiPiro textbook. By reading the relevant chapters in Pharmacotherapy: A Pathophysiologic Approach you will be able to familiarize yourself with the pathophysiology and pharmacology of each disease state included in this casebook. Each case teaches you how to: Identify real or potential drug therapy problems Determine the desired therapeutic outcome Evaluate therapeutic alternatives Design an optimal individualized pharmacotherapeutic plan Develop methods to evaluate the therapeutic

outcome Provide patient education Communicate and implement the pharmacotherapeutic plan Everything you need to develop expertise in pharmacotherapy decision making: Realistic patient presentations include medical history, physical examination, and laboratory data, followed by a series of questions using a systematic, problem-solving approach Compelling range of cases – from the uncomplicated (a single disease state) to the complex (multiple disease states and drug-related problems) Diverse authorship from more than 190 clinicians from nearly 100 institutions Coverage that integrates the biomedical and pharmaceutical sciences with therapeutics Appendices containing valuable information on pharmacy abbreviations, laboratory tests, mathematical conversion factors, anthropometrics, and complementary and alternative therapies Pharmacotherapy Preparatory Review and Recertification Course Springer Whether you are interpreting the medical

literature to optimize patient care, improve health outcomes, or generate hypothesis for research, an understanding of biostatistics is essential for success. Despite exposure to biostatistics in undergraduate and professional education, pharmacists tend to be less confident in their knowledge of biostatistics and their ability to interpret the medical literature than in their clinical skills. This book was developed to bolster the pharmacist's knowledge and confidence for using biostatistical tools for interpreting the literature. With material drawn from ACCP's renowned Pharmacotherapy Self-Assessment Program (PSAP) and the live pharmacotherapy preparatory course *Updates in Therapeutics*, editor Robert DiCenzo, Pharm.D., FCCP, BCPS, has designed this review to support pharmacists' preparation for the *Pharmacotherapy and Ambulatory Care*

Board of Pharmacy Specialties (BPS) examinations.

Allogeneic Stem Cell Transplantation ASHP Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-

to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies,

acute co- nary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

A change is coming. By 2050, the world's 65-and-older population will double, and the 85 and older population will mushroom fivefold. As the number of older adults surge, so too will the number of medication management challenges pharmacists and other health care providers experience. For the geriatric population, complex cases are often the norm, and providing safe and effective care can mean considering assessments of function and cognition,

contacting multiple prescribers, adults, providing evidence-based and understanding a patient's history, beliefs, and care giving situation before making therapeutic decisions. Fundamentals of Geriatric Pharmacotherapy: An Evidence-Based Approach gives practitioners the information they need to improve outcomes and personalize care for elderly patients. Section 1 explores important foundational concepts such as social and behavioral issues, ethical considerations, biomedical principles of aging, geriatric assessment, and polypharmacy. Section 2 covers common disease states in aging

treatment information as well as helpful tips for minimizing common problems and contending with clinical controversies. Particular attention is given to how treatment can differ along the spectrum of active elderly to frail elderly patients. Useful features throughout the book guide practitioners in navigating the maze of information required when caring for an older patient. These include: Summarized treatment guidelines Reviews of the evidence-base Special focus on recommendations for frail elderly At least one full case
