Natural Selection - Battle of the Beak Introduction While on the Galapagos Islands, Charles Darwin noticed the difference between the beaks of different finches. The finches on each island had different beaks and they were all different from the beaks of the main land finches. He thought they had different types of beaks because through natural
A New Beak Evolution Lab!

The science lab was divided into seven different challenges for my little birds. Each station contained three different beaks. They had to time each challenge and see which beak was most appropriate to obtain the food in each environment. Challenge #5 was all about flying insects. They had to determine which beak would be the best catcher!
