The Official History of the Royal Canadian Air Force Bookbaby

This aviation handbook is designed to be used as a quick reference to the classic military heritage aircraft that have been flown by members of the Canadian Air Force, Royal Canadian Air Force, Royal Canadian Navy, Canadian Army and the present-day Canadian Forces. The interested reader will find useful information and a few technical details on most of the military aircraft that have been in service with active Canadian squadrons

both at home and overseas. 100 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to Canadian service aircraft. For those who like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers have been included, along with a list of aircraft held in each museum's current inventory or on display as gate guardians throughout Canada and overseas. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of Canada's heritage

warplanes have completely disappeared, a few have been carefully collected, restored and preserved, and some have even been restored to flying condition. This guide-book should help you to find and view Canada's Warplane survivors.

Low level flying in military aircraft at speeds of up to 500 mph and as low as 100 feet above the ground is as challenging for the pilot as it is for the photographer wishing to capture the action. This is two books in one, the main subject is about military low flying; the skills, reasons and dangers from a pilot's perspective. The writer also talks about the challenges faced, revealing how and where the images were taken from

mountainsides and desert canyons to cockpits for air to air. Pilots describe their training, mission planning, systems and the aircraft they love to fly; from A-7 Corsairs and F-4 Phantoms to Tornados, Typhoons, F-15 Eagles and Gripen. They fly low to deliver weapons or gather data and evade Radar. Pilots from air forces across Europe and the United States talk about the skills they need to be effective in very dangerous flying environments, discussing the challenging conditions they face when flying fast and low over snow, the sea or through mountain ranges at night.

Commanders with years of low level flying give a fascinating insight in to their most memorable sorties.

Canadian Warbird Survivors Per ArduaTraining an RAF Phantom Crew

When he became a commercial pilot at age nineteen, Bill Grenier never imagined that one day he'd be captain of the largest commercial plane the world had seen, flying the highest profile routes of a proud national carrier. Even less could he have imagined, at

age nineteen and with barely a penny to his name, that he'd one day be a wealthy man. But he would ultimately control an empire worth nearly a billion dollars. With liberal doses of wit and humour, Miles to Millions shows what a little luck, lots of perseverance, and an appetite for adventure can do. From boarding house to boardroom, from cradle to cockpit, Grenier offers a fascinating story of success both as a commercial pilot and as a businessman. Filled with anecdotes you'd never expect from a single career from acting as repo man taking planes for payment to saving hundreds of passengers in a stricken 747 with a collapsed co-pilot Miles to Millions is a high-flier of a story bound to entertain both aviation experts and enthusiasts alike.

Iraqi Air Power Reborn provides the most authoritative account of the Iraqi air arms in the years following Operation Iraqi Freedom. In the space of over a decade since Harpia Publishing presented its groundbreaking and ever-popular Iraqi Fighters, the Iraqi Air Force has undergone an unprecedented transformation. Having been almost entirely decimated by coalition air strikes in 2003, and during the insurgency that followed, Baghdad has set about rebuilding its air power from scratch. This book summarizes the history of the Iraqi Air Force and its various incarnations until

2003 before detailing the efforts to establish a new-look Air Force, which began with training formations, before adding transport and reconnaissance squadrons, and finally attack and fighter squadrons - the latter now equipped with the Lockheed Martin F-16 Fighting Falcon. Coverage also extends to Iraqi Army Aviation, and its various transport, special operations, armed reconnaissance and attack squadrons. Iraqi Army Aviation in particular has been blooded in the fighting that has plagued Iraq since the coalition invasion, and, using pilot testimonies and other sources, author Arnaud Delalande provides exhaustive coverage of successive campaigns waged by Iraqi air power

against local and foreign insurgents, including the so-called Islamic State. As well as an overview of Iraq's air arsenal, therefore, this work also serves as a primer of the ongoing conflict within the country. A map of all current Iraqi air bases complements the comprehensive photographic coverage and a detailed order of battle is included, together with squadron patches. A full list is provided of aircraft serial numbers and attrition to all causes since 2004. Iraqi Air Power Reborn is one of the first books in an all-new format from Harpia Publishing. Those readers familiar with Harpia's previous titles will recognize the format, layout, and high-quality production standards.

Compared to earlier Harpia titles, however, the new series are altogether more compact, running to a total of 80 pages, and enabling coverage of 'smaller' themes. Of course, these books also retain the now-familiar in-depth coverage, painstaking research and lavish illustrations of their 'bigger brothers'.
REVIEWS "...vital volume. Arnaud Delelande's timely tome remains required reading for anyone following Mid-East flashpoints. I loved it. Roundly recommended!"

Flying the McDonnell Douglas F-4 Phantom was a young man's dream but the path from "Civvy

Street" to operational on a fighter squadron was long, arduous and beset with obstacles. To succeed meant the chance to fly one of the most iconic combat aircraft that ever took to the air but not every fledgling aviator who began the journey fulfilled their ambition to wear the coveted "Op. badge". "Per Ardua--Training an RAF Phantom Crew" describes how Cold War aircrew assimilated the skills needed to fly and fight the complex fighter jet. It follows the progress through every stage and explains why it cost millions to train each pilot and navigator. Philip

Keeble and David Gledhill, both former Phantom aircrew, recount the challenges and the emotions encountered during the rigorous training process in a frank yet light hearted way that will leave you wondering how anyone achieved the goal.
