This book analyses the impact of HIV and AIDS on performance in the twenty-first century from an international perspective. It marks a necessary reaffirmation of the productive power of performance to respond to a public and political health crisis and act as a mode of resistance to cultural amnesia, discrimination and stigmatisation. It sets out a

number of challenges and contexts for HIV and AIDS performance in the twenty-first century, including: the financial interests of the pharmaceutical industry; the unequal access to treatment and prevention technologies in the Global North and Global South; the problematic division between dominant (white, gay, urban, cis-male) and marginalised narratives of HIV; the tension between a damaging cultural amnesia and a potentially equally damaging partner ' AIDS nostalgia ' ; the criminalisation of HIV non-disclosure; and, sustaining and sustained by all of

these, the ongoing stigmatisation of people living with HIV. This collection presents work from a vast range of contexts, grouped around four main areas: women ' s voices and experiences; generations, memories and temporalities; inter/national narratives; and artistic and personal reflections and interventions.

The impact of humanity on the earth overshoots the earth ' s bio-capacity to supply humanity ' s needs, meaning that people are living off earth ' s capital rather than its income. However, not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts. The contributors describe daily life in many different places in

the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints.

This leads to comparison and discussion of what living within the limits of the planet might mean.

Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives. This book takes a ' bottom-up ' approach by calculating the footprints of daily living. The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future. Offering a global perspective on the question of sustainable living, this book will

be of great interest to anyone with a concern for the future, as well as students and researchers in environmental studies, human geography and development studies.

There has been an explosion of interest in paddling right across the world – in 2020, British Canoeing reported a 40% rise in members, with 19,000 signing up in a 3-month period. Much of this interest has been in inflatable kayaks, with the author ' s own website (inflatablekayaksandpackrafts.com) averaging 1,000 visits a day. The comparatively low cost, the convenience of inflatable kayaks, and the fact that you can just get in and go, all add up to their appeal. And with thousands of miles of

waterways in the UK, most are within reach of a river or canal where you can paddle your kayak and enjoy being in the fresh air, gently travelling through the natural world. You see the country from a different perspective and in an eco-friendly way. But, as with everything, a little bit of knowledge and technique makes the experience so much more enjoyable! That is where this book comes in. It provides a perfect introduction to the sport. It takes you through the different types of inflatable kayaks, so you buy the one that is right for you. It shows you the basic on-the-water skills that you will need, including getting in and out, how to paddle straight and turn. It outlines the gear you

will need and talks about where to paddle as well as weather, safety, maintenance and repair of your equipment. It covers kayaking in rivers and canals, lakes and lochs, and coastal kayaking. All aspects are heavily illustrated with colour photographs making it easy to understand and clear to follow.
