"Cop Doc's Guide to Public Safety Complex Trauma Syndrome" is written in response to the need for an advanced, specialized guide for clinicians to operationally define, understand, and responsibly treat complex post-traumatic stress and grief syndromes in the context of the unique varieties of police personality styles. The book continues where

Rudofossi's first book, "Working with Traumatized Police Officer Patients", left off. Theory is wed to practice and practice to effective interventions with police officer-patients. The 'how' and 'why' of a clinician's approach is made highly effective by understanding the distinct personality styles of officer-patients. Rudofossi's theoretical approach segues into difficult examples that highlight each officer-patient's eco-ethological field experience of loss in trauma, with a focus on enhancing resilience and motivation to - otherwise left disenfranchised. Thus, this original work expands the ecological-ethological existential analysis of complex PTSD into the context of personality styles, with an emphasis on resilience - without ignoring the pathological aspects of loss that often envelop officer-patient trauma syndromes.

Bridge the gap between theory and reality by implementing real-world examples using the Sparx EA tool and ArchiMate® 3.1 specification to develop sophisticated enterprise architecture models serving every unit in your organization

Key Features

- Discover the various artifacts that enterprise architects need to develop for stakeholders to make sound decisions
- Build a functional enterprise architecture repository that is rich in information, references, and metamodels
- Learn how to use Sparx Enterprise Architect from scratch

Book Description Most organizations face challenges in defining and achieving evolved enterprise architecture practices, which can be a very lengthy process even if implemented correctly. Developers, for example, can build better solutions only if they receive the necessary design information from architects, and decision-makers can make appropriate changes within the organization only if they know the implications of doing so. The book starts by addressing the problems faced by enterprise architecture practitioners and provides solutions based on an agile approach to enterprise architecture, using ArchiMate® 3.1 as an industry standard and Sparx EA as the modeling tool. You'll learn with the help of a fictional organization that has three business units, each expecting something different from you as the enterprise architect. You'll build the practice, satisfy the different requirements of each business unit, and share the knowledge with others so they can follow your steps. Toward the end, you'll learn how to put the diagrams and the content that you have developed into documents, presentations, and web pages that can be published and shared with any stakeholder. By the end of this book, you'll be able to build a functional enterprise architecture practice that supports every part of your organization. You'll also have developed the necessary skills to populate your enterprise architecture repository with references and

artifacts. What you will learn

- Discover how enterprise architects can contribute to projects and departments within organizations
- Use Sparx Enterprise Architect to build a rich architecture repository
- Learn about the ArchiMate® 3.1 specification as you apply it in real-world projects
- Use the focused metamodel technique to build the information necessary for maintaining your repository's consistency and accuracy
- Understand the importance of keeping architectural artifacts simple yet eye-catching
- Define an operational model that fits your initial needs and expands as required

Behavioral correlates of hormones, emphasized by psychologists, have captured the attention of economists in the past years. Behavioral economists, in particular, have investigated the possible roles of hormones on economic decision making and behavior as well as social preferences and cognitive abilities. Testosterone, oxytocin, dopamine, serotonin and stress hormones are the foremost studied ones in economic contexts. Yet, the results are mixed and the relationship between hormones and economic behavior is under-investigated to this date. Hormone levels are measurable and manipulatable (e.g. activate, de-activate, block). The fact that the behavioral economics also employs experimental methodology makes it possible to observe both correlational and causal relationships between hormones and economic behavior. Since numerous environmental, social and biological factors interact with hormone fluctuations, capturing the true impacts of hormones on

decisions and behavior is challenging.

Manipulating hormone levels in the body is a method that is used to tackle this issue. Such studies compare observed behaviors of hormones or placebo administrated participants to determine causal relationships. This Research Topic welcomes the studies on the direct or indirect correlates of hormones on economic behavior and decision making to create new insights on the economic consequences of endocrine activity.
