Colleges look much the same as they did five or ten years ago, but a lot has changed behind the scenes. While some mixture of study and play has always been part of college life, an increasing number of schools have completely abandoned the idea that students need to learn or demonstrate that they've learned.

Financial pressures have made college administrations increasingly reluctant to flunk anyone out, regardless of performance, although the average length of time to get a degree is now five years, and for many students it's six or more. Student evaluations of professors—often linked to promotion and tenure decisions—have made professors realize that applying tough standards, or any standards, only hurts their own career progress. For many professors, it's become easier and more rewarding to focus on giving entertaining lectures and to give everyone reasonably good grades. The worst of these schools are the "subprime" colleges, where performance standards and accountability have been completely abandoned. Students enjoy a five year party with minimal responsibilities while their parents pay the bills. These schools' investment decisions (first-class gyms and dining centers) are all geared to attracting students that want to have a good time, and their brochures all emphasize the fun aspects of the college

experience—there are very few pictures of students actually studying or in class. And after graduation, former students are frequently unable to find work in their chosen fields, thanks to their school's reputation with employers, and unable to afford the payments on sizeable student loans. The subprime colleges, which "teach" a significant percentage of college students, are only the tip of the iceberg. All colleges, even the most elite, have moved in this direction to some extent. If you are a parent sending your child to college, *The Five-Year Party* will give you critical information you need about what is really happening at your child's college, and what you can do to ensure help your child gets a real education. Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Crafting the right research question, finding good sources, properly summarizing them, operationalizing concepts and designing good tests for their hypotheses, presenting and analyzing quantitative as well as qualitative data are all tough-going without a great deal of guidance and encouragement. *Writing a Research Paper in Political Science* breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. *New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to*

guide students through the research and writing process. Updated and more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it. [Student Assessment in Higher Education](#) Routledge

Student assessment in online learning is submitted remotely without any face-to-face interaction, and therefore, student authentication is widely seen as one of the major challenges in online examination. Authentication is the process of determining whether someone or something is, in fact, who or what it is declared to be. As the dependence upon computers and computer networks grows, especially within education, the need for authentication has increased. Biometric Authentication in Online Learning Environments provides innovative insights into biometrics as a strategy to mitigate risk and provide authentication, while introducing a framework that provides security to improve e-learning and on-line examination by utilizing biometric-based authentication techniques. This book examines e-learning, security, threats in online exams, security considerations, and biometric technologies, and is designed for IT professionals, higher education administrators, professors, researchers, business professionals, academicians, and

libraries seeking topics centered on biometrics as an authentication strategy within educational environments.

While many introductory public administration textbooks contain a dedicated chapter on ethics, The Public Administration Profession is the first to utilize ethics as a lens for understanding the discipline. Analyses of the ASPA Code of Ethics are deftly woven into each chapter alongside complete coverage of the institutions, processes, concepts, persons, history, and typologies a student needs to gain a thorough grasp of public service as a field of study and practice. Features include: A significant focus on "public interests," nonprofit management, hybrid-private organizations, contracting out and collaborations, and public service at state and local levels. A careful examination of the role that religion may play in public servants' decision making, as well as the unignorable and growing role that faith-based organizations play in public administration and nonprofit management at large. End-of-chapter ethics case studies, key concepts and persons, and dedicated "local community action steps" in each chapter. Appendices dedicated to future public administration and nonprofit career management,

Statutes and Ordinances of the University of Cambridge 2008 Zeta Books

The time for what? The title of Mihaela Gligor's edited collection is wonderfully flexible, as anything having to do with time should be. There is something not only boundless about time, but also raw and untamed. In its pure form, time would be too much for us to handle. We would be crushed by the sheer immensity of it, or else we would lose our minds trying to make sense of such unmediated time. Luckily, for the most part we don't experience time in its pure form. Time comes to us already processed: shaped, engineered, tamed. The volume does fine justice to the notion that we experience time as already shaped by religion, politics, and culture. Whether its contributions cover religious or political figures, philosophers or poets, mystics or physicists, they show - sometimes explicitly, sometimes more discreetly - how difficult it is to deal with time in a pure, unmediated form. The contributors' cultural, religious, and intellectual rooting inform the way think about time, just as about anything else.

Which, far from being a weakness, is something to be recognized and celebrated. (Costic? Br?d??an, Texas Tech University, U.S.A.)
