Melinda Wagner goes beyond this stereotype to portray the way these schools foster American popular culture and "professional education culture" as well as "Christian culture." In her participant observation study of a variety of Christian schools (sponsored by fundamentalist, evangelical, new charismatic, Holiness, and Pentecostal Christians), Wagner describes and interprets how such compromises are made.

The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the

cohesiveness and structure of mathematics. Students who are taking basic mathematics and prealgebra classes in college present a unique set of challenges. Many students in these classes have been unsuccessful in their prior math classes. They may think they know some math, but their core knowledge is full of holes. Furthermore, these students need to learn much more than the course content. They need to learn study skills, time management, and how to deal with math anxiety. Some students lack basic reading and arithmetic skills. The organization of Prealgebra makes it easy to adapt the book to suit a variety of course syllabi. 8 Great Smarts Saxon Pub "Prealgebra is designed to meet scope

and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school--one that will train him or her to read, to think, to understand?, to be well-rounded and curious about learning. Veteran home educators Jessie Wise and Susan Wise Bauer outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," the middle school "logic stage," and the high school "rhetoric stage." Using this theory as your model, you'll be able to instruct your child in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. This newly revised edition contains completely updated ordering information for all curricula and books, new and expanded curricula recommendations, new

material on using computers and distance-learning resources, answers to common questions about home education, information about educational support groups, and advice on practical matters such as working with your local school board, preparing a high school transcript, and applying to colleges.
