There have been major recent advances in robotic systems that can replace humans in undertaking hazardous activities in demanding or dangerous environments. Published in association with the CLAWAR (Climbing and Walking Robots and Associated Technologies Association) (www.clawar.org), this important

book reviews the development of robotic systems for de-mining and other risky activities such as fire-fighting. Part one provides an overview of the use of robots for humanitarian de-mining work. Part two discusses the development of sensors for mine detection whilst Part three reviews developments in both teleoperated and autonomous robots. Building on the latter, Part four concentrates on robot autonomous navigation. The final part of the book reviews research on multi-agent-systems (MAS) and the multi-robotics-systems (MRS), promising tools that take into

account modular design of mobile robots and the use of several robots in multi-task missions. With its distinguished editors and international team of contributors, *Using robots in hazardous environments: landmine detection, de-mining and other applications* is a standard reference for all those researching the use of robots in hazardous environments as well as government and other agencies wishing to use robots for dangerous tasks such as landmine detection and disposal. Reviews the development of robotic systems for de-mining and other risky activities. Discusses the development and applications of sensors for mine detection using different robotic systems. Examines research on multi-agent-systems and multi-robotics systems.

A chilling exposé of the international effort to minimize the health and environmental consequences of nuclear radiation in the wake of Chernobyl. Dear Comrades! Since the accident at the Chernobyl power plant, there has been a detailed analysis of the radioactivity of the food and territory of your population point. The results show that living and working in your village will cause no harm to adults or children. So began a pamphlet issued by the Ukrainian Ministry of Health—which, despite its optimistic beginnings, went on to warn its readers against consuming local milk, berries, or mushrooms, or going into the surrounding forest. This was only one of many misleading bureaucratic manuals that, with apparent good intentions, seriously underestimated the far-reaching consequences of the Chernobyl nuclear catastrophe. After 1991, international organizations from the Red Cross to Greenpeace sought to help the victims, yet

found themselves stymied by post-Soviet political circumstances they did not understand. International diplomats and scientists allied to the nuclear industry evaded or denied the fact of a wide-scale public health disaster caused by radiation exposure. Efforts to spin the story about Chernobyl were largely successful; the official death toll ranges between thirty-one and fifty-four people. In reality, radiation exposure from the disaster caused between 35,000 and 150,000 deaths in Ukraine alone. No major international study tallied the damage, leaving Japanese leaders to repeat many of the same mistakes after the Fukushima nuclear disaster in 2011. Drawing on a decade of archival research and on-the-ground interviews in Ukraine, Russia, and Belarus, Kate Brown unveils the full breadth of the devastation and the whitewash that followed. Her findings make clear the irreversible impact of man-made radioactivity on every living thing; and hauntingly, they force us to confront the untold legacy of decades of weapons-testing and other nuclear incidents, and the fact that we are emerging into a future for which the survival manual has yet to be written.

This book includes the original, peer-

reviewed research from the 2nd

International Conference on Emerging

Trends in Electrical, Communication and
Information Technologies (ICECIT 2015),

held in December, 2015 at Srinivasa

Ramanujan Institute of Technology,

Ananthapuramu, Andhra Pradesh, India. It

covers the latest research trends or

developments in areas of Electrical

Engineering, Electronic and

Communication Engineering, and

Computer Science and Information.

Bibliography of Agriculture with Subject
Index

Written as a sequel to The Agricultural Tractor

1855-1950 by R. B. Gray and Farm Tractors

1950-1975 by Lester Larson, each chapter lists

most of the new tractors introduced for that

year, a summary of the specifications for the

models, and information about the companies

manufacturing the tractors.

Small Tractor Service Manual

With a Haynes manual, you can do-it-

yourself...from simple maintenance to basic

repairs. Haynes writes every book based on a
complete teardown of the vehicle, where we learn
the best ways to do a job and that makes it quicker,
easier and cheaper for you. Haynes books have
clear instructions and hundreds of photographs that
show each step. Whether you are a beginner or a
pro, you can save big with a Haynes manual! This
manual features complete coverage for your John
Deere Tractor Models 50, 60 and 70, covering:
