Belarusans in the
United States
traces the history
and describes the
lives and activities
of the over half-
million Belarusans
who have entered
the United States
over the last

century. Vitaut Kipel
presents extensive
statistics and
documentation on
these immigrants so
that they can be
understood within
the socio-political
contexts that
prevailed in Belarus
and the United
States. He clarifies
the complex terms
necessary to
understand the
Belarusan settlers
because of the
constantly changing
names and rulers of
this land now known
as the Republic of
Belarus. Kipel
demonstrates the
growing sense of
nationalism felt by
the Belarusans as
the end of the
Soviet Union
neared and the
eventual
independence of
Belarus became
imminent. He notes

the effects of the events in Belarus on those who moved to the United States, while chronicling the actions of the people as a group in a new country.

Manual Bibliography of Agriculture Using Robots in Hazardous Environments Elsevier Prairie Farmer Packages Tractors, unique in their uses, have undergone thousands of changes over the years to become one of the most handy machines one can have, in any form. There have been so many amazing discoveries and inventions in the history of mankind that it would be difficult to place them in order of importance. Many have revolutionized the way society works, and this could also be said of the humble tractor.

Without it, it would be impossible to produce the vast amounts of food required by society today, and for this reason alone it must qualify as a small but essential cog in the vast machine that is the modern world. The earliest pioneer machines used steam traction rather than the new-fangled internal combustion engines, but technological break-throughs came thick and fast: diesel engines, Harry Ferguson's revolutionary three-point-hitch, sophisticated hydraulics, and the wonders of electronics in our own time. Henry Ford made tractors

that small farmers could afford, International Harvester pioneered the 1920s Farmall - the first tractor able to cope with row crops - while Allison-Chalmers introduced pneumatic rubber tires in the 1930s. Nearly 30 years later the Steiger brothers invented an entirely new breed, the giant four-wheel-drive articulated super-tractor. This book covers more than a century of tractor-making and features tractors that are regarded with something like affection - Case, Fordson, Massey-Ferguson, Minneapolis-Moline, Versatile -

they are all here and many others.

Tractors of all shapes, sizes, ages, colors and types - they are here in all their resplendent glory.

A chilling exposé of the international effort to minimize the health and environmental consequences of nuclear radiation in the wake of

Chernobyl. Dear Comrades! Since the accident at the Chernobyl power plant, there has been a detailed analysis of the radioactivity of the food and territory of your population point. The results show that living and working in your

village will cause no harm to adults or children. So began a pamphlet issued by the Ukrainian Ministry of Health—which, despite its optimistic beginnings, went on to warn its readers against consuming local milk, berries, or mushrooms, or going into the surrounding forest. This was only one of many misleading bureaucratic manuals that, with apparent good intentions, seriously underestimated the far-reaching consequences of the Chernobyl nuclear catastrophe. After 1991, international organizations from the Red Cross to Greenpeace sought to help the victims, yet found themselves stymied by post-Soviet

political circumstances they did not understand. International diplomats and scientists allied to the nuclear industry evaded or denied the fact of a wide-scale public health disaster caused by radiation exposure. Efforts to spin the story about Chernobyl were largely successful; the official death toll ranges between thirty-one and fifty-four people. In reality, radiation exposure from the disaster caused between 35,000 and 150,000 deaths in Ukraine alone. No major international study tallied the damage, leaving Japanese leaders to repeat many of the same mistakes after the Fukushima nuclear disaster in 2011.

Drawing on a decade of archival research and on-the-ground interviews in Ukraine, Russia, and Belarus, Kate Brown unveils the full breadth of the devastation and the whitewash that followed. Her findings make clear the irreversible impact of man-made radioactivity on every living thing; and hauntingly, they force us to confront the untold legacy of decades of weapons-testing and other nuclear incidents, and the fact that we are emerging into a future for which the survival manual has yet to be written. Abstracts of Bulgarian Scientific Literature CarTech Inc There have been major recent advances in robotic

systems that can replace humans in undertaking hazardous activities in demanding or dangerous environments. Published in association with the CLAWAR (Climbing and Walking Robots and Associated Technologies Association) (www.clawar.org), this important book reviews the development of robotic systems for de-mining and other risky activities such as fire-fighting. Part one provides an overview of the use of robots for humanitarian de-mining work. Part two discusses the development of sensors for mine detection whilst Part three reviews developments in both teleoperated and

autonomous robots. Building on the latter, Part four concentrates on robot autonomous navigation. The final part of the book reviews research on multi-agent-systems (MAS) and the multi-robotics-systems (MRS), promising tools that take into account modular design of mobile robots and the use of several robots in multi-task missions. With its distinguished editors and international team of contributors, *Using robots in hazardous environments: landmine detection, de-mining and other applications* is a standard reference for all those researching the use of robots in hazardous environments as well as government and other agencies wishing

to use robots for dangerous tasks such as landmine detection and disposal. Reviews the development of robotic systems for de-mining and other risky activities. Discusses the development and applications of sensors for mine detection using different robotic systems. Examines research on multi-agent-systems and multi-robotics systems. *Emerging Trends in Electrical, Communications and Information Technologies*. The political map of Eastern Europe changed dramatically in December 1991 when the leaders of Belarus, Russia, and Ukraine huddled together in a Bielavie?a Forest retreat and decided to dissolve the 15

union republics, which composed the Union of Soviet Socialist Republics (USSR). One of those republics was the Belorussian Soviet Socialist Republic (BSSR). A United Nations member since 1945, Belarus has a rich cultural heritage that is seen as a promising base for the development of a solid national identity and for real independence. It is this cultural heritage and sense of history that nourish the ongoing efforts of the nationalist minority, as well as the larger democratic opposition, to resist the regime of President Alaksandr Luka?enka who is bent on restoring ties to Russia. Thus Belarus, with its burdens of the past and potential for the

future, finds itself in a struggle that will affect not only its own destiny, but also the international structure of Eastern Europe. The second edition of the Historical Dictionary of Belarus--through its chronology, introductory essays, appendixes, map, bibliography, and hundreds of cross-referenced dictionary entries on important persons, places, events, and institutions and significant political, economic, social, and cultural aspects--traces Belarus' history and provides a compass for the direction the country is heading. **Farm Equipment Red Book Issue** Written as a sequel to The

Agricultural Tractor 1855-1950 by R. B.
