This document is designed to help practitioners and policymakers in the European Union's member states coordinate their initial and continuing vocational education and training (VET) programs. It presents a subclassification of the recently revised International Standard Classification of Education (ISCED) that encompasses all fields of VET. The document

begins with an overview of the fields of education in the ISCED, which was developed by the United Nations Educational, Scientific and Cultural Organization to serve as a tool for assembling, compiling, and presenting national and international educational statistics. The creation of a third digit to permit classification of VET within the ISCED system is explained along with the subject content approach underpinning the ISCED. Presented next are a table detailing the 9 broad fields, 25 fields of education, and (approximately) 65 fields of training in the ISCED system and instructions for using the manual. The actual field descriptions are listed next. Descriptions of each of the 25 fields of VET are described next. Each description includes the following: field name; field audience; types of programs offered at various levels; and specific types of

training included in/excluded from the field. Concluding the document are alphabetic and systematic code lists. (MN)

Brunei Air force Handbook - Strategic Information and Weapon Systems Lulu.com Training circular (TC) 3-04.7 outlines requirements concerning aviation maintenance structure, organizations, and functions. The intended audiences are aviation maintenance commanders, leaders, officers, technicians, noncommissioned officers (NCOs), and aircraft repair and maintenance personnel. TC 3-04.7 applies to all active, Army Army National Guard (ARNG)/Army National Guard of the United States (ARNGUS), United States Army Reserve (USAR), civilian, and contract maintenance personnel unless otherwise stated. Commanders must consider the contents of this document and the particular circumstances in which they find themselves (national military objectives, available forces, threat capabilities, and rules of engagements) when planning maintenance operations. The term 'aircraft' refers to all Army aircraft types (rotary-wing, fixed-wing, and unmanned aircraft systems [UAS]), unless a specific aircraft has been identified in this publication.
