This groundbreaking book offers a step-by-step approach for drummers of all styles to learn and apply the concept of open-handed playing on the modern drumset. Based on concepts developed by teaching great Jim Chapin and fusion legend Billy Cobham, Open-Handed Playing not only outlines all

the benefits of avoiding the crossing of hands when playing the drumset, but provides an incredibly detailed, complete and approachable method for learning this technique. "There is a wealth of ideas and exercises that offer students inspiration to develop their own approaches and applications." Tom Morgan, Percussive Notes

An attractive manner is assured if we will avoid the following: Sarcasm, impertinence, ridicule, hot temper, profanity, roughness, brutality, vulgarity, a loud voice, and grouchiness.-from Chapter III, "The Development of Your Magnetic Power" The New Thought movement of the turn of the twentieth century combined Christian spirituality with the paranormal in order to give practical expression to the forces of the universe. Or so its proponents believed. One of the most influential thinkers of this early "New Age" philosophy promises here, in this 1914 book, to share "in a condensed, non-mystical style all I have been able to learn of this wonderful power" of personal magnetism. Mysteries revealed include: .the secrets of being naturally magnetic.the development of your magnetic power.how to use your personality to win the affection of the opposite sex.how to cultivate success.how to protect yourself against injurious thought attraction.how to make yourself a great power in the world.a formula for creating happiness Today's hunger for self-help, personal empowerment, and pop spirituality has its origins in a craving for self-improvement that's a century old, as this captivating little book demonstrates.Also available from Cosimo

Classics: The Art and Science of Personal Magnetism: The Secrets of Mental Fascination, by Theron Q. Dumont. American writer WILLIAM WALKER ATKINSON (1862-1932)-aka Theron Q. Dumont-was born in Baltimore and had built up a successful law practice in Pennsylvania before professional burnout led him to the religious New Thought movement. He served as editor of the popular magazine New Thought from 1901 to 1905, and as editor of the journal Advanced Thought from 1916 to 1919.

Many regulations issued by the U.S. Environmental Protection Agency (EPA) are based on the results of computer models. Models help EPA explain environmental phenomena in settings where direct observations are limited or unavailable, and anticipate the effects of agency policies on the environment, human health and the economy. Given the critical role played by models, the EPA asked the National Research Council to assess scientific issues related to the agency's selection and use of models in its decisions. The book recommends a series of guidelines and principles for improving agency models and decision-making processes. The centerpiece of the book's recommended vision is a life-cycle approach to model

evaluation which includes peer review, corroboration of results, and other activities. This will enhance the agency's ability to respond to requirements from a 2001 law on information quality and improve policy development and implementation.

This second Volume in the book Series on Nuclear Non-Proliferation in International Law discusses the legal interpretation and implementation of verification and compliance with the Treaty of the Non-Proliferation of Nuclear Weapons, 1968; the Comprehensive Nuclear Test-Ban Treaty, 1996; and the Treaty establishing the European Atomic Energy Community (EURATOM), 1957. It specifically examines the question, contested in recent academic writings, whether the International Atomic Energy Agency (IAEA) is

competent to verify not only the correctness, but also the completeness of national declarations. Topical legal issues of verification and its technical and political limits as well as peaceful settlement of disputes and countermeasures are discussed in-depth. The Series on Nuclear Non-Proliferation in International Law provides scholarly research articles with critical commentaries on relevant treaty law, best practice and legal developments, thus offering an academic analysis and information on practical legal and diplomatic developments both globally and regionally. It sets a basis for a further constructive discourse on the topic at both national and international levels. A Third Volume, to be published in Autumn 2016, will focus on

legal issues of safety and security of the use of nuclear energy for peaceful purposes. Jonathan L. Black-Branch is Professor of International Law, Royal Holloway University of London; a Member of Wolfson College, Oxford; Chairman of the International Law Association (ILA) Committee on Nuclear Weapons, Non-Proliferation and Contemporary International Law. Dieter Fleck is Former Director International Agreements & Policy, Federal Ministry of Defence, Germany; Member of the Advisory Board of the Amsterdam Center for International Law (ACIL); Honorary President, International Society for Military Law and the Law of War; Rapporteur of the ILA Committee on Nuclear Weapons, Non-Proliferation and Contemporary International

A systematic approach towards integration of design and manufacturing is essential for optimizing all elements of the integrated manufacturing system. This book is an attempt towards this approach and is intended to provide an introduction to the design process, the manufacturing processes and the tools for integration to young engineering students. Fundamental information on materials, manufacturing processes and integrated manufacturing are provided which will help the designer in the selection of most appropriate materials, processes and methods to transform his ideas into a successful product.

ingenious, packing a wallop of a surprise . . . Tepper knows how to write a well-made, on-moving story with strong characters. . . . She takes the mental risks that are the lifeblood of science fiction and all imaginative narrative.”—Ursula K. LeGuin, Los Angeles Times Since the flames died three hundred years ago, human civilization has evolved into a dual society: Women’s Country, where walled towns enclose what’s left of past civilization, nurtured by women and a few nonviolent men; and the adjacent garrisons where warrior men live—the lost brothers, sons, and lovers of those in Women’s Country. Two societies. Two competing dreams. Two ways of life, kept apart by walls stronger than stone. And yet there is a gate between them. . . .

“Tepper not only keeps us reading . . . she provokes a new look at the old issues.”—The Washington Post “Tepper’s cast of both ordinary and extraordinary people play out a powerful drama whose significance goes beyond sex to deal with the toughest problem of all, the challenge of surmounting humanity’s most dangerous flaws so we can survive—despite ourselves.”—Locus

This book examines in detail the role of transfontanellar pulsed and color Doppler imaging in the fetus and neonate. After an introductory chapter its use in the normal neonate is considered. Results of the hemodynamic evaluation of 491 newborns

aged from 32 weeks of gestation to 9 months by means of pulsed and color Doppler are reported. Normal values of the resistive index as determined by this technique are documented, and systolic, diastolic, and mean velocities in seven different vessels are presented. It is concluded that Doppler ultrasonography enables reliable analysis of arterial and venous velocities. Subsequent chapters examine the use of transfontanellar Doppler imaging in a variety of commonly encountered pathological conditions.

"It's easy to see why Parker's snappy banter and cynical eye have kept fans turning pages for 25 years . . . his wisecracks, combined with Parker's shorthand flair for scathing characterization, make for a satisfying read," said Entertainment Weekly of last year's Hush Money. Now Parker presents Spenser with a deceptively dangerous and multi-layered case: Someone has been killing racehorses at stables across the south, and the Boston P.I. travels to Georgia to protect the two-year-old destined to become the next Secretariat. When Spenser is approached by Walter Clive, president of Three Fillies Stables, to find out who is threatening his horse Hugger Mugger, he can hardly say no: He's been doing pro bono work for so long his cupboards are just about bare. Disregarding the resentment of the local Georgia law enforcement, Spenser takes the case. Though Clive has hired a separate security firm, he wants someone with Spenser's experience to supervise the operation. Despite a veneer of civility, Spenser encounters tensions beneath the surface southern gentility. The case takes an even more deadly turn when the attacker claims a human victim, and Spenser must revise his

impressions of the whole Three Fillies organization--and watch his own back as well. With razor-sharp dialogue, eloquently spare prose, and some of the best supporting characters to grace the printed page, Hugger Mugger is grand entertainment.

Trafford Publishing *Grundstufe Value Pack + Sam in Quia, Student Access Kit for Treffpunkt Deutsch: Grundstufe + Quick Guide to German Grammar* Penguin Formally known as Exercises in Health Claims Examining, The Practice of Health Claims Examining, 2e, contains a simulated work program to help you experience the real life situations that a claims examiner experiences on a daily basis. This book is created for use in conjunction with ICDC Publishing's Guide to Health Claims Examining. Some of the exercises in the simulated work portion of the book are based upon concepts learned in the Guide to Health Claims Examining (i.e., procedures for processing claims, interpretation of contracts, understanding UCR and deductibles, etc.). This book alone should

not be considered a complete text for learning health claims examining. It is suggested that a trainee take a complete health claims examining course prior to using this book. The simulated work portion of this text incorporates concepts which are not taught by simple data entry, for example UCR calculations, privacy guidelines, client record keeping, correspondence, and manual completion of claims processing. This text is designed to allow the student to work through the material at their own pace.

When Computers Went to Sea explores the history of the United States Navy's secret development of code-breaking computers and their adaptation to solve a critical fleet radar data handling problem in the Navy's first seaborne digital computer system - that went to sea in 1962. This is the only book written on the United States Navy's initial application of shipboard digital computers to naval warfare. Considered one of the most successful projects ever undertaken by the US Navy, the Naval Tactical Data System (NTDS) was the subject of

numerous studies attempting to pinpoint the reason for the systems inordinate success in the face of seemingly impossible technical challenges and stiff resistance from some in the military. The system's success precipitated a digital revolution in naval warfare systems. Dave Boslaugh details the innovations developed by the NTDS project managers including: project management techniques, modular digital hardware for ship systems, top-down modular computer programming techniques, innovative computer program documentation, and other novel real-time computer system concepts. Automated military systems users and developers, real-time process control systems designers, automated system project managers, and digital technology history students will find this account of a United States military organization's initial foray into computerization interesting and thought provoking.
