Academic Reading Circles is a teacher-resource book for a learner-centred reading skills approach. It explains and exemplifies an intensive reading approach aimed at improving learner engagement with and understanding of concepts in non-fiction texts, like those encountered in undergraduate courses. This approach combines individual investigation with collaborative construction of knowledge through group sharing and discussion. In the book, teachers are guided through an entire ARC cycle, including: \*the initial introduction of ARC to learners; \*the five ARC roles learners undertake when reading a text; \*detailed examples of their use on a sample text; \*solutions for groupings, assessment, and potential problem areas; and \*downloadable activities to further facilitate ARC beyond this book. Academic Reading Circles is ideal for teacher use in pre-sessional or in-sessional EAP programs at the university level. Secondary and general ESL/EFL teachers may also benefit. The book is published with the round.

Across the globe, the past several years have seen a tremendous increase in the role of cooperative autonomous systems. The field of cooperative control and optimization has established itself as a part of many different scientific disciplines. The contents of this hugely important volume, which adds much to the debate on the subject, are culled from papers presented at the Seventh Annual International Conference on Cooperative Control and Optimization, held in Gainesville, Florida, in January 2007. Principles and Practice of Constraint Programming - CP 2009

This volume presents a collection of papers presented at the 16th International Symposium of Robotic Research (ISRR). ISRR is the biennial meeting of the International Foundation of Robotic Research (IFRR) and its 16th edition took place in Singapore over the period 16th to 19th December 2013. The ISRR is the longest running series of robotics research meetings and dates back to the very earliest days of robotics as a research discipline.

---

This 16th ISRR meeting was held in the 30th anniversary year of the very first meeting which took place in Bretton Woods (New Hampshire, USA) in August 1983., and represents thirty years at the forefront of ideas in robotics research. As for the previous symposia, ISRR 2013 followed up on the successful concept of a mixture of invited contributions and open submissions. 16 of the contributions were invited contributions from outstanding researchers selected by the IFRR officers and the program committee, and the other contributions were chosen among the open submissions after peer review. This selection process resulted in a truly excellent technical program which featured some of the very best of robotic research. These papers were presented in a single-track interactive format which enables real conversations between speakers and the audience. The symposium contributions contained in this volume report on a variety of new robotics research results covering a broad spectrum organized into traditional ISRR categories: control; design; intelligence and learning; manipulation; perception; and planning.

#### Robotics

This volume contains the papers presented at CP 2009: The 15th International Conference on Principles and Practice of Constraint Programming. It was held from September 20 – 24, 2009 at the Rectory of the New University of Lisbon, Portugal. Everyone involved with the conference thanks our sponsors for their support. There were 128 submissions to the research track, of which 53 were accepted for a rate of 41.4%. Each submission was reviewed by three reviewers, with a small number of additional reviews obtained in exceptional cases. Each review was either by a Programme Committee member, or by a colleague invited to help by a committee member thanks to their particular expertise. Papers submitted as long papers were accepted at full length or not at all. It is important to note that papers submitted as short papers were held to the same high standards of quality as long papers. There is thus no distinction in these proceedings between long and short papers, except of course the number of pages they occupy. As it happens, the acceptance rates of short and long papers were very similar indeed. There were 13 submissions to the application track, of which 8 were accepted, for a rate of 61.5%. Papers underwent the same review process as regular papers, and there was not a separate committee for reviewing application track papers. However, papers in the application track were not required to be original or novel research, but to be original and novel as an application of constraints.
