The Invisible Work of Highly Effective Leaders Andrews McMeel Publishing  
The world has now faced the most severe global economic crisis since the Great Depression of the 1930s. Governments have responded to the crisis with many initiatives, often with implications for the openness of their national economies to global markets. While the primary objectives have been to support demand and thus economic activity and employment, recognition of cross-border spillovers has led to calls for international cooperation and to refrain from beggar-thy-neighbour measures. Arguably these calls have been heard. Efforts have been made to coordinate policy responses, through the G20 and other fora. As recovery becomes an ever greater prospect in late 2009, the question arises as to whether current, primarily non-binding inter-governmental cooperation will be sustained. Protectionist pressures may increase as trade recovers, imports into markets expand, and job growth still lags. Also, many governments are left with little margin for manoeuvre in fiscal and monetary policy, and in the event of an economic relapse, trade and industrial policies threaten to become the default stop-gap. The purpose of this book is to examine the ways in which the existing manifestations of openness, including binding international accords, have constrained or enhanced the options available to national policymakers during the crisis and influenced the degree, and potentially even the effectiveness, of cross-border cooperation. By examining state responses during the crisis in a number of distinct policy domains, the different chapters reveal potential complementarities and tensions as governments seek to tackle sharp national recessions while being mindful of the growing role that the international dimension has played in influencing national economies in an era of globalization.

This book is published open access under a CC BY license.  
This book constitutes the proceedings of the 5th International Workshop on Symbiotic Interaction, Symbiotic 2016, held in Padua, Italy, in October 2016. The 12 full papers and 3 short papers presented in this volume were carefully reviewed and selected from 23 submissions. The idea of symbiotic systems put forward in this workshop capitalizes on the computers ’ ability to implicitly detect the users goals, preferences or/and psycho-physiological states and thereby enhancing human-computer interaction (HCI). The papers present an overview of the symbiotic relationships between humans and computers with emphasis on user-driven research on symbiotic systems, adaptive systems, implicit input data, physiological computing and BCI, but also on understanding the nature of the interdependence and agency between computers and humans more broadly.

Tilt and shift lenses offer tremendous creative possibilities for users of digital SLR and mirrorless cameras. This practical book explains the techniques that will help you take better photos - photos that don't distort or lose focus. Assessing the benefits and pitfalls of a range of lenses, adapters, software and editing techniques, it guides you through the practicalities of working with these lenses and gives you the skills to use them to best effect. With stunning examples throughout, this book gives an overview of the different lenses available, and tips on how adapters can give tilt/shift options when using old medium-format lenses. It gives advice on how simple lens shift can change the entire look of your photos, and techniques for using lens tilt for focus control and close-up working. Stunning examples show the use of tilt and shift lenses across a range of available focal lengths, both tripod-mounted and handheld.

This series of books brings together results of an intensive research programme on aspects of the national systems of innovation (NSI) in the five BRICS countries — Brazil, Russia, India, China, and South Africa. It provides a comprehensive and comparative examination of the challenges and opportunities faced by these dynamic and emerging economies. In discussing the impact of innovation with respect to economic, geopolitical, socio-cultural, institutional, and technological systems, it reveals the possibilities of new development paradigms for equitable and sustainable growth. This volume explores the relationship between transnational corporations (TNCs) and NSI across BRICS economies. The essays highlight the role of foreign direct investment (FDI), the evolution of TNCs and examine local factors — such as government policies, human resources, market structures, and technological capabilities — that affect collaborative efforts with indigenous firms towards innovation and development. The authors approach the thesis of technological globalisation with some caution, refuting the idea that research and development (R&D) activities have been inexorably internationalised. Original and detailed data, together with expert analyses on wide-ranging issues, make this book an invaluable resource for researchers and scholars in economics, development studies and political science, in addition to policy makers and development practitioners interested in the BRICS countries.

With contributions from leading brand experts around the world, this valuable resource delineates the case for brands (financial value, social value, etc.) and looks at what makes certain brands great. It covers best practices in branding and also looks at the future of brands in the age of globalization. Although the balance sheet may not even put a value on it, a company’s brand or its portfolio of brands is its most valuable asset. For well-known companies it has been calculated that the brand can account for as much as 80 percent of their market value. This book argues that because of this and because of the power of not-for-profit brands like the Red Cross or Oxfam, all organisations should make the brand their central organising principle, guiding every decision and every action. As well as making the case for brands and examining the argument of the anti-globalisation movement that brands are bullies which do harm, this second edition of Brands and Branding provides an expert review of best practice in branding, covering everything from brand positioning to brand protection, visual and verbal identity and brand communications. Lastly, the third part of the book looks at trends in branding, branding in Asia, especially in China and India, brands in a digital world and the future for brands. Written by 19 experts in the field, Brands and Branding sets out to provide a better understanding of the role and importance of brands, as well as a wealth of insights into how one builds and sustains a successful brand.

The book looks to address the following questions in a post-crisis world: How have lead firms responded to the crisis? Have they changed their traditional supply chain strategy and relocated and/or outsourced part of their production? How will those changes affect developing countries? What should be the policy responses to these changes?

We revisit Lipset's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.
