How to Use the Magic of Metaphors to Sell, Persuade, & Explain Anything to Anyone Springer

'Think globally, act locally' has become a call to environmentalist mobilization, proposing a closer connection between global concerns, local issues and individual responsibility. A History of Environmentalism explores this dialectic relationship, with ten contributors from a range of disciplines providing a history of environmentalism which frames global themes and narrates local stories. Each of the chapters in this volume addresses specific struggles in the history of environmental movements, for example over national parks, species protection, forests, waste, contamination, nuclear energy and expropriation. A diverse range of environments and environmental actors are covered, including the communities in the Amazonian Forest, the antelope in Tibet, atomic power plants in Europe and oil and politics in the Niger Delta. The chapters demonstrate how these conflicts make visible the intricate connections between local and global, the body and the environment, and power and nature. A History of Environmentalism tells us much about transformations of cultural perceptions and ways of production and consuming, as well as ecological and social changes. More than offering an exhaustive picture of the entire environmentalist movement, A History of Environmentalism highlights the importance of the experience of environmentalism within local communities. It offers a worldwide and polyphonic perspective, making it key reading for students and scholars of global and environmental history and political ecology.

Venice, 1585. When 16-year-old Laura della Scala learns that her older sister, Beatrice, has drowned, she is given no time to grieve. Instead, Laura's father removes her from the convent where he

forcibly sent her years earlier and orders her to marry Beatrice's fiancé, a repulsive old merchant named Vincenzo. Panicked, Laura betrays a powerful man to earn her way into the Segreta, a shadowy society of women who deal in only one currency—secrets. The Segreta seems like the answer to Laura's prayers. The day after she joins their ranks, Vincenzo is publicly humiliated and conveniently exiled. Soon, however, Laura begins to suspect that her sister's death was not a tragic accident but a cold-blooded murder—one that might involve the Segreta and the women she has come to trust.

Wall Street Journal bestseller Watch your most innovative ideas take flight by overcoming the forces that resist change *The Human Element* is for anyone who wants to introduce a new idea or innovation into the world. Most marketers, innovators, executives, activists, or anyone else in the business of creating change, operate on a deep assumption. It is the belief that the best (and perhaps only) way to convince people to embrace a new idea is to heighten the appeal of the idea itself. We instinctively believe that if we add enough value, people will eventually say "yes." This reflex leads us down a path of adding features and benefits to our ideas or increasing the sizzle of our messaging - all in the hope of getting others on board. We call this instinct the "Fuel-based mindset." The Fuel-based mindset explains so much of what we do, from adding countless trivial features to software, to bolting a sixth blade onto a shaving razor. By focusing on Fuel, innovators neglect the other half of the equation - the psychological Frictions that oppose change. Frictions create drag on innovation. And though they are rarely considered, overcoming these Frictions is essential for bringing new ideas into the world. *The Human Element* highlights the four Frictions that operate against innovation. Readers will discover: Why their best ideas and initiatives often get rejected - despite their undeniable value How to disarm the forces of resistance that act against change How to transform the very Frictions that hold us back into catalysts for change Perfect for business leaders, product managers, educators, and anyone else who seeks to bring new and exciting ideas to life, *The Human Element* is an indispensable resource to help people overcome the powerful forces of human nature that instinctively resist change.

This edited collection testifies to the fact that the animal liberation movement is now entering its political phase, after a period dominated by ethical approaches that undermined the paradigm of human supremacy and demanded justice for nonhuman beings. The contributors of this book collectively confront and take on questions of social transformation, guided by the idea that philosophy has an important role to play even at such a new level. They start from such diverse perspectives as critical theory, left liberalism, and biopolitical thought. The result is an articulated picture in which, beyond any principled divergence, it is possible to detect the emergence of a relevant set of shared political preoccupations. This exploration of those offers fresh theoretical insights and suggestions for praxis.

This clear and lively introduction to probability theory concentrates on the results that are the most useful for applications, including combinatorial probability and Markov chains. Concise and focused, it is designed for a one-semester introductory course in probability for students who have some familiarity with basic calculus. Reflecting the author's philosophy that the best way to learn probability is to see it in action, there are more than 350 problems and 200 examples. The examples contain all the old standards such as the birthday problem and Monty Hall, but also include a number of applications not found in other books, from areas as broad ranging as genetics, sports, finance, and inventory management.

"A beautiful novel" of life and death, past and present, and the thin lines that lie between them (The Toronto Star). On a streetcar, on Christmas Day, 1950, clutching the chrome rail in front of him, Martin Radey looks at the woman seated beside him, a stranger, and utters his last words: "I can't breathe." Like millions, billions before him, it is his turn to die. But death is not what he expected. The journey has only begun. From 1880 to 1950, time happens to the world around him, not to memory, because memory, he discovers, is beyond time, traveling forward with him, shaping the earth, the sky, the heart. The prequel to the widely celebrated Shadow of Ashland, A Witness to Life "is an emotionally charged experience that will not soon be forgotten." (Dallas Morning News)

This comprehensive book thoroughly explains and demystifies important concepts needed for effective machinery malfunction diagnosis: (A) Vibration fundamentals: vibration, phase, and vibration vectors. (B) Data plots: timebase, average shaft centerline, polar, Bode, APHT, spectrum, trend XY, and the orbit. (C) Rotor dynamics: the rotor model, dynamic stiffness, modes of vibration, anisotropic (asymmetric) stiffness, stability analysis, torsional and axial vibration, and basic balancing. Modern root locus methods (pioneered by Walter R. Evans) are used throughout this book. (D) Malfunctions: unbalance, rotor bow, high radial loads, misalignment, rub and looseness, fluid-induced instability, and shaft cracks.
