"In the Fall of 2010 I gave an assignment in my Appalachian Literature class at Berea College, telling my

students to write their own version of "Where I'm From" poem based on the writing prompt and poem by George Ella Lyon, one of the preeminent Appalachian poets. I was so impressed by the results of the assignment that I felt the poems needed to be preserved in a bound document. Thus, this little book. These students completely captured the complexities of this region and their poems contain all the joys and sorrows of living in Appalachia. I am proud that they were my students and I am very proud that together we produced this record of contemporary Appalachian Life" -- Silas House

Submachine Gun Dbi Books

This book was written to interest the reader in gun design. The gun industry needs and is due for the next big breakthrough. Every 100 years seems to bring the next big development in firearms technology. In the 1600's the wheel lock was

---

developed and heralded the first use of firearms. In the 1700's came the flintlock musket. In the 1800's came the percussion cap and later in the century the thin brass shell to carry the powder, ball ammunition, and primer was perfected. While the 20th century has seen the invention of liquid propellant, caseless ammunition, and the gyrojet, the thin brass shell has been hard to beat and is still the dominant way to feed ammunition to the firearms of today. We are due for the next big advance, but from where will it come? This book was written to interest the reader on the simplicity and the hidden complexity that good gun designs exhibit and prompt the imagination of the reader to investigate the field of firearms design further. Reading this book will give the reader:

- Two ways to calculate the round per minute level of a 9mm caliber submachine gun using the STEN submachine gun as an example and gives sample excel spreadsheets to allow the reader to experiment with different design conditions.
- The full technical data package of a reverse engineered STEN Submachine gun. The drawings are shown as individual operation process sheets showing the dimensions for each separate cut on an individual drawing.
- The cycle of operations of the STEN with illustrations.
- The analysis and sample calculations to design a gun barrel.
- A discussion of firearm metallurgy with recommendations on material selection and heat treatment for various components. This book is unique as it is not a picture book of firearms, a combat guide on how to use them, nor discusses their maintenance or care. It does expose the engineering that can go behind a gun design project. This book not only gives the reader the drawings for a gun but also explains the engineering and dynamics behind it.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. This monograph examines U.S. Marine and North Vietnamese Army (NVA) actions throughout much of the northern half of a region that became known as "Leatherneck Square," an area bounded by Con Thien and Gio Linh to the north--just below the demilitarized zone (DMZ)--and Cam Lo and Dong Ha to the south. The Battle of Con Thien also included activities within the DMZ north and west of Con

Thien as far as the Ben Hai River. More than a dozen Marine operations were involved in varying degrees with the Battle of Con Thien. This account deals with the battle's most significant and costly operations: Operation Hickory (18-28 May 1967), Operation Buffalo (2-14 July 1967), Operation Kingfisher (16 July-31 October 1967), and Operation Kentucky (1 November 1967-28 February 1968). This text is appropriate for military historians, scholarly professionals, and military science students as well as veterans.
