The transport, storage and handling of goods impose a heavy burden on the environment. As concern for the environment rises, companies must take more account of the external costs of logistics associated mainly with climate change, air pollution, noise, vibration and accidents. Leading the way in current thinking on environmental logistics, Green Logistics provides a unique insight on the environmental impacts of logistics and the actions that companies and governments can take to deal with them. It is written by a group of leading researchers in the field and provides a

comprehensive view of the subject for students, managers and policy-makers. Fully updated and revised, the 3rd Edition of Green Logistics takes a more global perspective than previous editions. It introduces new contributors and international case studies that illustrate the impact of green logistics in practice. There is a new chapter on the links between green logistics and corporate social responsibility (CSR) and a series of postscripts examining the likely effects of new developments, such as 3D printing and distribution by drone, on the environmental footprint of logistics. Other key topics examined in the book include: carbon auditing of supply chains; transferring freight to greener transport modes; reducing the environmental impact of warehousing; improving the energy efficiency of freight transport; making city logistics more environmentally sustainable; reverse logistics for the management of waste; role of government in promoting sustainable logistics. Ideal for use on related courses, the 3rd Edition of Green Logistics includes indispensable online supporting materials, including graphics, tables and chapter summaries, as well as technical information and guidelines for teachers and lecturers. The book is endorsed by the Chartered Institute of Logistics and Transport (CILT).

This book examines in detail both historical and current legal concepts of 'religious cultural heritage' within the context of the European continent. The latter group is primarily based on the variety of sacred cultural elements emanating from the different religious traditions of the peoples of Europe, which are deemed worthy of protection and preservation due to their outstanding value, in terms of their social, cultural and religious significance. In view of this, the study provides evidence of the European States' active involvement with their sacred/cultural treasures, on the basis of the political and legal foundations of neutrality and pluralism. Furthermore, the book analyzes all relevant international legislative instruments (i.e. the plethora of EU, EC and UNESCO norms), as well as all major European legislative patterns, in light of their significance for the aforementioned aspects of pluralism and neutrality. The interdisciplinary references listed at the end of each chapter provide an additional incentive for further reading on the subject matter. The most important finding to emerge from the study is that there is a shared legal ethos in Europe that imposes a duty of appropriate care concerning the vast variety of sacred cultural goods and the religious cultural heritage in general, as an invaluable repository of European cultural capital. It also considers the sui generis nature of this capital: like any other type of asset, it may deteriorate or fade over time, necessitating investment in its preservation or refurbishment; nevertheless, like no other, this particular capital maintains a distinct cultural value, as it contains an additional characteristic of 'sacredness'

expressed in the form of its 'religious character,' the latter being analyzed as a triptych of religious memory, religious aesthetics and religious beliefs.
