Markets, Games, and Strategic Behavior  
Wiley Global Education

At the moment of writing, we are in the last quarter of an incredible year. The world is facing an astonishing number of changes resulting from one of the worst pandemics ever. Food, agribusiness, and biofuel chains will be working in a new macro environment and will operate differently after 2020. These structural changes come on top of the need to increase food production to feed 9 billion people in 2050 and the urgency to increase renewable sources of energy to promote sustainability, save resources and limit climate change. 'Food and Agribusiness in 2030: A Roadmap' offers tools for understanding this new macro environment and helps to position food chains. It helps companies to take advantage of opportunities. The tools relate to strategic planning of food chains in the new scenario, understanding what will happen with chain participants, where markets will grow, how consumers will behave, how sustainability will gain importance, and how cooperatives, associations and other forms of collective actions will gather force. The goal of this book is to offer something very practical so that companies and other public or private

organisations can read a chapter and start discussing what they should do next and take a look at their roadmap. Good luck with your planning process.

Creating value through electronic and mobile commerce CONCEPTS AND CASES Princeton University Press

Russell Cooper and Andrew John have written an economics text aimed directly at students from its very inception. You're thinking, "Yeah, sure. I've heard that before." This textbook, Economics: Theory Through Applications, centers around student needs and expectations through two premises: Students are motivated to study economics if they see that it relates to their own lives. Students learn best from an inductive approach, in which they are first confronted with a problem, and then led through the process of solving that problem. Many books claim to present economics in a way that is digestible for students; Russell and Andrew have truly created one from scratch. This textbook will assist you in increasing students' economic literacy both by developing their aptitude for economic thinking and by presenting key insights about economics that every educated individual should know. How? Russell and Andrew have done three things in this text to accomplish that goal: Applications Ahead of Theory: They present all the theory that is standard in Principles books. But by beginning with applications, students get to learn why this theory is needed. Learning through Repetition: Important tools appear over and over again, allowing students to learn from repetition and to see how one framework can be useful in many different contexts. A Student's Table of Contents vs. An Instructor's Table of Contents: There is no further proof that Russell and Andrew have created a book aimed specifically at educating students about economics than their two tables of contents.
