As technology advances, it is imperative to stay current in the newest developments made within the engineering industry and within material sciences. Trends in manufacturing such as 3D printing, casting, welding, surface modification, computer numerical control (CNC), non-traditional, Industry 4.0 ergonomics, and hybrid machining methods must be closely examined to utilize these important resources for the betterment of society. Advanced Manufacturing Techniques for Engineering and Engineered Materials provides a unified and complete overview about the recent and emerging trends, developments, and associated technology with scope for the commercialization of techniques specific to manufacturing materials. This book also reviews the various machining methods for difficult-to-cut materials and novel materials including matrix composites. Covering topics such as agro-waste, conventional machining, and material performance, this book is an essential resource for researchers, engineers, technologists, students and professors of higher education, industry workers, entrepreneurs,

researchers, and academicians.

IAF from its humble beginning in 1932 has transformed itself into fourth largest AF operating at frontiers of technologies with multi-dimensional capabilities and a potent force to reckon with. It is said that the history is written by winners. But what is important is that the history is documented impartially, objectively and factually, as much as possible. It may be worth for IAF to consider coming out with a book each on Operations, Maintenance and Administration, depicting the historical decisions taken - successes and failures in equal measure - and how the IAF progressed over the decades to be what it is today - a professionally managed, optimally exploited, synergistically working and one of the most effective instruments of national power to ensure accomplishing objectives of the nation. Yes, coffee table books and anniversary issues do gloss over a few events, but the real history is made by the toil, blood and sweat and tears of the men behind these operations. Individual awards and citations many times compromise on actualities and are miserly with truth.

“ History is an argument without an end ” said Pieter Geyl the Dutch historian. “ I am glad to recommend this book to all, as the readers of the book, irrespective of their background, will enjoy the journey of these ‘ spanners and screwdrivers ’ of 12 AEC covering almost 900 man-years of IAF maintenance. It is also bound to raise curiosity in many minds to know more about air force maintenance. The book may act as a lighthouse for a lot of the present serving aeronautical engineers in their progression. ” – Air

Book of Majors 2014 College Board

The Book of Majors 2014 by The College Board helps students answer these questions: What's the major for me? Where can I study it? What can I do with it after graduation? Revised and refreshed every year, this book is the most comprehensive guide to college majors on the market. In-depth descriptions of 200 of the most popular majors are followed by complete listings of every major offered at more than 3,800 colleges, including four-year and two-year colleges and technical schools. The 2014 edition covers every college major identified by the U.S. Department of Education—over 1,200 majors are listed in all. This is also the only guide that shows what degree levels each college offers in a major, whether a certificate, associate, bachelor's, master's or doctorate. The guide features:

- insights—from the professors themselves—on how each major is taught, what preparation students will need, other majors to consider and much more.
- updated information on career options and employment prospects.
- the inside scoop on how students can find out if a college offers a strong program for a particular major, what life is like for students studying that major, and what professional societies and accrediting agencies to refer to for more background on the major.

This is the first book in our country describing the utilization of fiber optics technology in aviation. As on today almost all new generation aircrafts are installed with some fiber optics systems and/or fiber optics sensors. This book gives all latest advances taking place in aviation as far as fiber optics technology is concerned. As on today no university/engineering college of aviation branch (Aeronautical Engineering) syllabus is having this latest technology included in their subject, hence this is the right time to include this subject as a compulsory subject for students, so that they are fully aware of this new technology incorporated in all new generation aircrafts. Practitioners and Students may use this book “ Fiber Optics & Aviation: Integration ” as postscript to my earlier written book “ Fiber Optics fundamentals and advances in optical communications ” for better and intended understanding.

Choosing a career of your passion is likewise the crest of a wave. Opting Aerospace Engineering is one of those. Undoubtedly persuing Aerospace Engineering is quite challenging out of all other. You might feel bit tricky while studying in academic years but your zeal to learn and grow can turn up the trumps. If you push the stick forward, the houses get bigger. If you pull the stick back, they get smaller. That is, unless you keep pulling the stick all the way back, then they get bigger again. “ Within all of us is a varying amount of space lint and star dust, the residue from our creation. Most are too busy to notice it, and it is stronger in some than others. It is strongest in those of us who fly and is responsible for an unconscious, subtle desire to slip into some wings and try for the elusive boundaries of our origin. ” ”
