A comprehensive resource for those interested in promoting an eco-friendly lifestyle offers a host of user-friendly suggestions and case studies that can be applied by both individual homeowners or a community to building or remodeling a green home or incorporating renewable energy sources, food supply, or transportation options into a school, business, hospital, or community. Original.

Drawdown Gibbs Smith

IN PREFAB GREEN, architect Michelle Kaufmann shares her vision of creating thoughtful, sustainable design for everyone. Her firm, Michelle Kaufmann Designs, blends sustainable home layouts, eco-friendly materials, and low-energy options to create a "prepackaged" green solution to home design. Kaufmann tells about five eco-principles that are present in every design her firm creates-smart design, eco-materials, energy efficiency, water conservation, and healthy environment-and how each work together to create homes that make a difference. Michelle Kaufmann founded Michelle Kaufmann Designs in 2002. Michelle's work is widely published and her homes have been showcased in a number of museums including the National Building Museum, the Vancouver Art Center, MOCA in Los Angeles, and Chicago's Museum of Science and Industry. Michelle lives in Marin County, California. Cathy Remick has worked as a staff architect and designer for several national firms in San Francisco and Washington, D.C. She is a design manager for mkStudios. She lives in Orinda, California.

Green Building Materials Penguin

GREEN BUILDING MATERIALS THE ULTIMATE USER'S MANUAL TO GREEN BUILDING MATERIALS To properly select and specify green building materials, successful architects need authoritative, real-world advice on how to select and use nontoxic, recycled, and recyclable products, and how to integrate these products into the design process in order to capitalize on the many practical and economic advantages of "going green." Green Building Materials, Third Edition is the most reliable, up-to-date resource to meet today's green building challenges—from reducing waste and improving energy efficiency to promoting proper code compliance and safeguarding against liability claims. Written by two nationally known experts on green building methods and materials, Green Building Materials, Third Edition offers in-depth, practical information on the product selection, product specification, and construction process. This new Third Edition is an excellent hands-on guide to today's newest range of green building materials: what they are, where to find them, how to use them effectively, and how to address LEED requirements. Organized by CSI MasterFormat® category for fast access to specific information, it features: A new chapter on eco-labels, green standards, and product certification A new appendix providing reference information for sustainability standards and standards development organizations New sample specifications, including green power requirements, vegetated green roof systems, rainwater harvesting, and water reuse systems Revised and updated review of trends affecting the future of green building materials Updated approach and reference information for the product selection process Green Building Materials, Third Edition is an essential tool for designing environmentally friendly buildings—ones made from materials that preserve the Earth's natural legacy for future generations.

I find Choosing Green incredibly insightful and chock full of insider's experience. This is the kind of book that will help homebuyers cut to the chase and leap frog the poseurs towards legitimate green home living. I think Choosing Green would also be helpful to builders that are trying to green their business. Building green, as Yudelson discusses in the book, is the hottest trend in the building industry, but you have to know how to do so in the best, most effective way. So if you're looking for a thorough guide to good green homes, make sure to pick up a copy of Choosing Green. Reviewed by Preston D K, Jetson Green Energy-efficient, non-toxic, healthy homes are the hottest trend in the building industry. Homebuilders are constructing green homes in astonishing numbers—nearly 200,000 in the United States alone in 2006. How does a home buyer who wants a green home know what to look for, what questions to ask a builder, which green home rating systems to trust, and what homes are on the market? Nationally recognized green-building expert Jerry Yudelson provides answers to some common areas of concern, including: Energy-efficient home features Water conservation fixtures Non-toxic finishes Green products Healthy indoor air Drawing from the expertise of dozens of homebuilders, government officials, and green home experts, Choosing Green deftly takes the reader through these considerations with easy-to-use tables, charts, maps, score sheets, and checklists. The book includes a glossary of green building terms, an extensive resource section, and a list of homebuilders, green rating programs, and financial incentives. This comprehensive book provides home buyers with every thing they will need to make a successful search for their own green home. Jerry Yudelson is the president of Yudelson Associates, green building consultants. He has trained over 3,000 people in the LEED green building rating system. He chairs Greenbuild, the world's largest green building conference, and has written six books on green building, including Green Building A to Z (New Society Publishers).

[The Energy Audit](#) Lulu.com

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Choosing Green The Stationery Office

An optimistic--but realistic and feasible--action plan for fighting climate change while creating new jobs and a healthier environment: electrify everything. Climate change is a planetary emergency. We have to do something now—but what? Saul Griffith has a plan. In *Electrify*, Griffith lays out a detailed blueprint—optimistic but feasible—for fighting climate change while creating millions of new jobs and a healthier environment. Griffith’s plan can be summed up simply: electrify everything. He explains exactly what it would take to transform our infrastructure, update our grid, and adapt our households to make this possible. Billionaires may contemplate escaping our worn-out planet on a private rocket ship to Mars, but the rest of us, Griffith says, will stay and fight for the future. Griffith, an engineer and inventor, calls for grid neutrality, ensuring that households, businesses, and utilities operate as equals; we will have to rewrite regulations that were created for a fossil-fueled world, mobilize industry as we did in World War II, and offer low-interest “climate loans.” Griffith’s plan doesn’t rely on big, not-yet-invented innovations, but on thousands of little inventions and cost reductions. We can still have our cars and our houses—but the cars will be electric and solar panels will cover our roofs. For a world trying to bounce back from a pandemic and economic crisis, there is no other project that would create as many jobs—up to twenty-five million, according to one economic analysis. Is this politically possible? We can change politics along with everything else.

Go Green John Wiley & Sons

Offers practical strategies to help people live green at home, explaining how they can cut energy costs and consumption by changing the way they heat, cool, light, and fill their homes.

New Green Home Solutions: Renewable Household Energy and Sustainable Living Gibbs Smith

Green by Design Rodale

There is no "one-size-fits-all" plan for so-called "green" homes; rather, there are universal principles of design that can be applied to individual tastes and needs. Architect Angela Dean offers a variety of ways to incorporate green building into your home, including using healthy building materials such as straw bales and natural flooring, taking advantage of local materials and resources, reusing gray water for landscaping, and incorporating passive solar design. Her goal is to teach people how to think about building sustainable homes. *Green by Design* provides a

thorough analysis of what it means to build green and offers advice on what to consider when designing a sustainable home. *Green by Design* features full-color photographs and line drawings of floor plans show different examples of successful sustainable homes. It also includes in-depth case studies of more than a dozen homes so readers planning a green home can see what worked for others. By providing people with knowledge, inspiration, and the ability to ask the right questions (and understand the answers) *Green by Design* puts home builders and owners on a path to creating beautiful, environmentally responsible homes that they can be proud to live in. Angela Dean, AIA, is principal architect of AMD Architecture in Salt Lake City. She specializes in environmentally responsible designs to create healthy, comfortable buildings that are in harmony with the environment

Simple Green Smoothies New Society Publishers

Oil and coal have built our civilisation, created our wealth and enriched the lives of billions. Yet their rising costs to our security, economy, health and environment are starting to outweigh their benefits. Moreover, the tipping point where alternatives work better and compete purely on cost is not decades in the future - it is here and now. And that tipping point has become the fulcrum of economic transformation. In *Reinventing Fire*, Amory Lovins and the Rocky Mountain Institute offer a new vision to revitalise business models and win the clean energy race - not forced by public policy but led by business for long-term advantage. This independent and rigorous account offers market-based solutions integrating transportation, buildings, industry and electricity. It maps pathways for running a 158%-bigger US economy in 2050 but needing no oil, no coal, no nuclear energy, one-third less natural gas and no new inventions. This transition would cost \$5 trillion less than business-as-usual - without counting fossil fuels' huge hidden costs. Whether you care most about profits and jobs, or national security, or environmental stewardship, climate, and health, *Reinventing Fire* makes sense. It's a story of astounding opportunities for creating the new energy era. -- Publisher description.
