"A compelling blend of science, history and storytelling. Barbara Ravage has fashioned an enlightening, invaluable book."

—Stewart O'Nan, author of *The Circus Fire: A True Story of an American Tragedy* Though each of us is just a spark away from being a burn victim, the public knows little and understands less about the world that patients inhabit. Pulling the curtains back on this private and sterile environment, *Burn Unit* is a riveting

account of the frontline efforts—both modern-day and historical—to save lives devastated by fire. With unflinching urgency, Barbara Ravage follows an extraordinary team of healers at Massachusetts General Hospital, the cradle of modern burn treatment and the site of one of the best burn units in the world. From Boston's Coconut Grove fire of 1942 to the treatment of the victims of the Rhode Island nightclub fire in early 2003, we watch everyday heroes do their incredible but punishing work against the backdrop of history. Both a moving human drama and an engrossing scientific exploration of this little-known field of medicine, *Burn Unit* is an unforgettably powerful read.

Getting burnt is a painful situation to go through and when you have to add being scarred not only physically but also emotionally from the experience, it only makes it worse. There is a different classification of the burns that people suffer; they are placed into categories of first, second and third degree burns to speak to the degree to which the burn has penetrated the skin as well as the tissues. The flesh can be burnt via electricity, chemicals, friction, and heat, among others. There are ways in which to treat burns, but it is dependent on the degree of the burn that you will make the decision as to if it can be treated at home using natural remedies or if you will need to see a doctor immediately so as to avoid infection and even death as the latter is possible if the burn is not treated properly. There are also ways and means by which you can prevent the scarring of the burnt area, or to reduce the level of scarring that result from you being burnt. There are also methods that can be used to fade the scars that you receive as a result of being burnt, albeit these scars cannot be completely removed. The way you treat your burn in the first instance of being burnt will be a big determinant of if you are scarred any at all as well as to the level of scarring that will result in the long run.
