Zero-Beta Portfolio

“Beta” refers to the degree to which a given investment or portfolio is more or less volatile than its benchmark index. A fund with a beta coefficient of 1 implies that it will move with the market.

The Formula for Calculating Beta

Alpha is the excess return or active return of an investment or a portfolio. Beta measures the volatility of a security or portfolio compared to the market.

Chapter 5 investments Flashcards | Quizlet

Beta (B a) -- Most investors use a beta calculated by a third party, whether it's an analyst, broker or Yahoo! Finance. You can calculate beta yourself by running a straight-line statistical regression on data points showing price changes of a broad market index versus price changes in your risky asset.
