Frederik Pohl was on a streak when this Hugo Award – finalist novel was published in 1980. Now back in print after an absence of nearly a decade, this unique science fiction novel is as fresh and entertaining as ever. The story begins when the hero of Gateway finances an expedition to a distant alien spaceship that may end famine forever. On the ship, the explorers find a human

boy, and evidence that reveals of Solomon--a militant a powerful alien civilization is thriving on a transport ship headed right for Earth.... At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Off Armageddon Reef
Penguin

R.S. Belcher, the acclaimed author of *The Six-Gun Tarot* and *The Shotgun Arcana* launches a gritty new urban fantasy series about the mysterious society of truckers known only as, *The Brotherhood of The Wheel*. In 1119 A.D., a group of nine crusaders became known as the Poor Fellow-Soldiers of Christ and of the Temple

monastic order charged with protecting pilgrims and caravans traveling on the roads to and from the Holy Land. In time, the Knights Templar would grow in power and, ultimately, be laid low. But a small offshoot of the Templars endure and have returned to the order's original mission: to defend the roads of the world and guard those who travel on them. There is a secret line of knights: truckers, bikers, taxi hacks, state troopers, bus drivers, RV gypsies--any of the folks who live and work on the asphalt arteries of America. They call themselves the

Brotherhood of the Wheel. Jimmy Aussapile is one such knight. He's driving a big rig down South when a promise to a ghostly hitchhiker sets him on a quest to find out the terrible truth behind a string of children gone missing all across the country. The road leads him to Lovina Hewitt, a skeptical Louisiana State Police investigator working the same case and, eventually, to a forgotten town that's not on any map--and to the secret behind the eerie Black-Eyed Kids said to prowl the highways.

"A lucid overview of [environmental] problems and a compelling call to

action." —Publishers

Weekly From two of science fiction's most celebrated

and brilliant minds—Isaac Asimov and Frederik

Pohl—comes the second edition of Our Angry Earth, a

comprehensive analysis of today's environmental threats

and a guide on how we can heal our planet, with an

introduction and afterword

from New York Times bestselling author Kim Stanley Robinson. Our Angry Earth provides a candid picture of the present and many possibilities for a better, cleaner future. From the greenhouse effect and depletion of our ozone layer to nuclear waste and species extinction, Asimov and Pohl not only present accessible explanations of complex scientific processes but ways we can improve our behavior and relationship with the planet, whether it be involvement in social activism or individual lifestyle changes. Kim Stanley Robinson, author of New York Times bestsellers 2312, New York 2140, and the internationally renowned Mars trilogy, brings his decades-spanning expertise in climate change to Our Angry Earth 's introduction and afterword. What would happen if you fell into a Black Hole? Black holes are found throughout the universe. They can be microscopic. They can be

billions of times larger than our Sun. They are dark on the outside but not on the inside. Anything that enters them can never escape, and yet they contain nothing at all. In Black Hole Survival Guide physicist and novelist Janna Levin takes you on a journey into a black hole, explaining what would happen to you and why. In the process you'll come to see how their mysteries contain answers to some of the most profound questions ever asked about the nature of our universe.

When Comet Sicara brushed near enough to strip the ozone layer from the Earth's atmosphere, civilization effectively ended - in fact, life on Earth was nearly extinguished. But the underwater cities survived, and some heavily protected land enclaves held on as well. When the "ozone summer" years were ending, submarine captain Ron Tregarth rediscovered his lost love, Graciela Navarro. But their triumph against all odds was only the beginning, for the alien known as the Eternal stood between them and threatened to destroy all they held dearest. The Eternal's goal was to absorb the minds of every living thing, to create a death-in-life to enslave the planet.

From a National Book Award winner, plane crash survivors struggle to find safety in the

wilderness when they encounter humans who suffered a similar crash. The harrowing tale of survival takes its most dramatic turn yet when Molly, Yoshi, and the rest discover that there are more than just monsters in the rift in the Earth where they struggle to find food and shelter. There are other kids, too . . . kids who have been surviving in the wilderness much longer for reason both suspicious and supernatural. The seven-book mega-series begun by #1 New York Times – bestselling author Scott Westerfeld (Uglies) reaches a pivotal turning point as only New York Times bestseller and National Book Award winner Jude Watson could deliver!

An original novel written by Hugo Award-winning author N. K. Jemisin and Mass Effect creative director Mac Walters Lieutenant Cora Harper joined the Systems Alliance to develop and enhance her powerful biotic talents. She was assigned to the asari commando unit Talein's

Daughters, where she honed her abilities to become a skilled and deadly huntress. Returning to Earth, Cora finds herself a stranger among other humans, and joins the Andromeda Initiative as Alec Ryder's second-in-command. The mission will send 100,000 colonists on a one-way, 600-year-long journey into the unknown. When essential—and dangerous—tech is stolen, Cora is assigned to recover it before it can be used against the Initiative, and end the mission before it can begin.

Build Beyond Zero Del Rey

This open access edited volume invites transdisciplinary scholars to re-vision science education in the era of the Anthropocene. The collection assembles the works of educators from many walks of life and areas of practice together to help reorient science education toward the problems and peculiarities associated with the geologic times many call the Anthropocene. It has become evident that science education—the way it is currently institutionalized in various forms of school science, government policy, classroom practice, educational research, and public/private research laboratories—is ill-

equipped and ill-conceived to deal with the expansive and urgent contexts of the Anthropocene. Paying homage to myopic knowledge systems, rigid state education directives, and academic-professional communities intent on reproducing the same practices, knowledges, and relationships that have endangered our shared world and shared presents/presence is misdirected. This volume brings together diverse scholars to reimagine the field in times of precarity.

Much of our behavior is guided by our understanding of events. We perceive events when we observe the world unfolding around us, participate in events when we act on the world, simulate events that we hear or read about, and use our knowledge of events to solve problems. In this book, Gabriel A. Radvansky and Jeffrey M. Zacks provide the first integrated framework for event cognition and attempt to synthesize the available psychological and neuroscience data surrounding it. This

synthesis leads to new proposals about several traditional areas in psychology and neuroscience including perception, attention, language understanding, memory, and problem solving. Radvansky and Zacks have written this book with a diverse readership in mind. It is intended for a range of researchers working within cognitive science including psychology, neuroscience, computer science, philosophy, anthropology, and education. Readers curious about events more generally such as those working in literature, film theory, and history will also find it of interest.

“Net Zero” has been an effective rallying cry for the green building movement, signaling a goal of having every building generate at least as much energy as it uses. Enormous strides have been made in improving the performance of every type of new building, and even more importantly, renovating the vast and energy-inefficient collection of existing buildings in every country. If we can get every building to net-zero energy use in the next few decades, it will be a huge success, but it will not be enough. In *Build Beyond Zero*, carbon pioneers Bruce King and Chris Magwood re-envision buildings as one of our most practical and affordable climate solutions instead of leading drivers of climate change. They provide a snapshot of a

beginning and map towards a carbon-smart built environment that acts as a CO2 filter. Professional engineers, designers, and developers are invited to imagine the very real potential for our built environment to be a site of net carbon storage, a massive drawdown pool that could help to heal our climate. The authors, with the help of other industry experts, show the importance of examining what components of an efficient building (from windows to solar photovoltaics) are made with, and how the supply chains deliver all those products and materials to a jobsite. Build Beyond Zero looks at the good and the bad of how we track carbon (Life Cycle Assessment), then takes a deep dive into materials (with a focus on steel and concrete) and biological architecture, and wraps up with education, policy and governance, circular economy, and where we go in the next three decades. In Build Beyond Zero, King and Magwood show how buildings are culprits but stand poised to act as climate healers. They offer an exciting vision of climate-friendly architecture, along with practical advice for professionals working to address the carbon footprint of our built environment. Gateway Orb Books

Black Hole Survival Guide VIZ Media LLC

Humanity pushed its way to the stars - and encountered the Gbaba, a ruthless alien race that nearly wiped us out. Earth and her colonies are now smoldering ruins, and the few survivors have fled to distant, Earth-like Safehold, to try to rebuild. But the Gbaba can detect the emissions of an industrial civilization, so the human rulers of Safehold have taken extraordinary measures: with mind control and hidden high technology, they've built a religion in which every Safeholdian believes, a religion designed to keep Safehold society medieval forever. 800 years pass. In a hidden chamber on Safehold, an android from the far human past awakens. This "rebirth" was set in motion centuries before, by a faction that opposed shackling humanity with a concocted religion. Via automated recordings, "Nimue" - or, rather, the android with the memories of Lieutenant Commander Nimue Alban - is told her fate: she will emerge into Safeholdian society, suitably disguised, and begin the process of provoking the technological progress which the Church of God Awaiting has worked for centuries to prevent. Nothing about this will be easy. To better deal with a medieval society, "Nimue" takes a new gender and a new name, "Merlin." His formidable powers and access to caches of hidden high technology will need to be carefully concealed. And he'll need to find a base of operations, a Safeholdian country that's just a little more freewheeling, a little less orthodox, a little more open to the new. And thus Merlin comes to Charis, a mid-

sized kingdom with a talent for naval warfare. He plans to make the acquaintance of King Haarahld and Crown Prince Cayleb, and maybe, just maybe, kick off a new era of invention. Which is bound to draw the attention of the Church...and, inevitably, lead to war. It's going to be a long, long process. And David Weber's epic Off Armageddon Reef is can't-miss sci-fi.
