Possum Bourne: rally driver, sporting icon, family man, team-builder and 'great bloke'. Three-time winner of the Asia-Pacific Rally Championship, winner seven times in a row of the Australian Rally Championship, and eight times the best placed New Zealand driver in the Rally of New Zealand. In 2003, he finally achieves his long cherished dream of competing in the World Rally Championship, but is fatally injured in a freak car crash. This is the story of how his positive attitude, his determination to succeed, and his ability to inspire others to help him brought him motorsport fame. "Very few New Zealanders pass the first name test - instantly recognisable when just their first name is used. Ed Hillary, Zinzan Brooke, Jonah Lomu, Stacey Jones and Onny Parun are or have been examples of this rudimentary litmus test of fame. Possum Bourne was another." Joseph Romanos

First published in 1962, this book provides a systematic account of the development of Plato's theory of knowledge. Beginning with a consideration of the Socratic and other influences which determined the form in which the problem of knowledge first presented itself to Plato, the author then works through the dialogues from the *Meno* to the *Laws* and examines in detail Plato's progressive attempts to solve the problem.

This book addresses several issues related to the introduction of automaton and robotics in the construction industry in a collection of 23 chapters. The chapters are grouped in 3 main sections according to the theme or the type of technology they treat. Section I is dedicated to describe and analyse the main research challenges of Robotics and Automation in Construction (RAC). The second section consists of 12 chapters and is dedicated to the technologies and new developments employed to automate processes in the construction industry.

Among these we have examples of ICT technologies used for purposes such as construction visualisation systems, added value management systems, construction materials and elements tracking using multiple IDs devices. This section also deals with Sensorial Systems and software used in the construction to improve the performances of machines such as cranes, and in improving Human-Machine Interfaces (MMI). Authors adopted Mixed and Augmented Reality in the MMI to ease the construction operations. Section III is dedicated to describe case studies of RAC and comprises 8 chapters. Among the eight chapters the section presents a robotic excavator and a semi-automated façade cleaning system. The section also presents work dedicated to enhancing the force of the workers in construction through the use of Robotic-powered exoskeletons and body joint-

adapted assistive units, which allow the handling of greater loads.

Dr. Smith's diet has been featured on VH1's number-one rated show, *Celebrity Fit Club*, where Hollywood celebrities follow his customized diet plan and compete to lose weight. Now, with *The Fat Smash Diet*, everyone will have access to the revolutionary eating plan that leads to lifestyle changes and permanent weight loss forever. *The Fat Smash Diet* is not a gimmick or short-term fix. It is a four-phase diet that starts out with a natural detox phase to clean impurities out of the system. Once this nine-day phase is completed, the next three phases encourage the addition of everyday foods that promote significant weight loss. In just thirty days, most dieters will complete all four phases and be on their way to a thinner lifetime of good health. Best of all, there is no calorie counting, and Dr. Smith guarantees there never will be. As an added bonus, there are over fifty easy-to-cook, tasty recipes that make it easier to stick with Dr. Smith's plan. *The Fat Smash Diet* is unlike any other program on the market. In fact, it's the **LAST DIET YOU'LL EVER NEED!**

ASP.NET MVC (Model View Framework) allows you to use ready-to-use MVC code so you can develop Web applications faster. This book's cut-to-the-chase approach gets you up to speed on the new ASP.NET MVC without getting bogging you down in learning or re-learning ASP.NET itself. You'll receive straightforward instruction on concepts, backed by real-world case studies and examples that offer practical solutions. Topics include test-driven development and unit testing, the principles of the MVC pattern, how to implement it, how to move from traditional ASP.NET Webforms to ASP.NET MVC, and much more.

Be warned—in your journey through this volume you will encounter many true stories. Some will make you laugh, others could make you cry, and all are enough to thoroughly embarrass the authors. These stories would never be allowed to see the light of day if they did not open the door to important truths about love. The authors speak to you, sometimes in their own voices, sometimes through dialogue, and sometimes through fiction. You will recognize yourself in their struggles and triumphs. Can the good life be attained without true love? What is jealousy? Is it possible to be a feminist and a heterosexual lover at the same time? What is the logic of the lovers' quarrel? Is rough sex immoral? Is pornography a great lover's friend or a foe? What did Plato, Aristotle, Kant, Nietzsche, Russell, Beauvoir, and other great geniuses of Western history have to say about what goes on under the boardwalk? Is there any freedom in love? Is erotic desire a function of body or spirit? What is the best kind of love? Is there such a thing as a soul mate? You will have to face these questions and more when you dare to ask what philosophy can tell you about your lover. Everyone who has experienced it knows that romantic love truly is a "crazy little thing." It keeps us awake at night and makes us do things we would never have dreamed we were capable of. In this volume twenty-five philosophy professors are gathered together to discuss various connections between romantic love and philosophy. They have left their tweed jackets and spectacles behind. It is as though you have run into them by chance at a bar in some far away city where they are at ease, ready to tell you what they really think. Perhaps you have taken a few philosophy classes, or perhaps you always kind of wanted to. This is your chance to enjoy some deep reflection on one of life's greatest mysteries without any of the scholarly jargon, the academic pretenses, or the impossible exams. This volume will explain the lasting value of their ideas in simple, modern terms without the use of a

single footnote.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

The economies of South Korea and Taiwan in the second half of the twentieth century are to scholars of economic development what the economy of Britain in the late eighteenth and early nineteenth centuries is to economic historians. This book, first published in 2006, is a collaboration between a leading trade economist and a leading economic sociologist specializing in East Asia, and offers an explanation of the development paths of post-World War II Korea and Taiwan. The ambitions of the authors go beyond this, however. They use these cases to reshape the way economists, sociologists, and political scientists will think about economic organization in the future. They offer nothing less than a theory of, and extended evidence for, how capitalist economies become organized. One of the principal empirical findings is that a primary cause for the industrialization of East Asia is the retail revolution in the United States and the demand-responsiveness of Asian manufacturers.

This book will cover both the evidence for biofilms in many chronic bacterial infections as well as the problems facing these infections such as diagnostics and

treatment regimes. A still increasing interest and emphasis on the sessile bacterial lifestyle biofilms has been seen since it was realized that that less than 0.1% of the total microbial biomass lives in the planktonic mode of growth. The term was coined in 1978 by Costerton et al. who defined the term biofilm for the first time. In 1993 the American Society for Microbiology (ASM) recognised that the biofilm mode of growth was relevant to microbiology. Lately many articles have been published on the clinical implications of bacterial biofilms. Both original articles and reviews concerning the biofilm problem are available.

Risk and Insurance in Construction Cambridge University Press

The latest, most effective engineering and construction project management strategies. Fully revised throughout, this up-to-date guide presents the principles and techniques of managing engineering and construction projects from the initial conceptual phase, through design and construction, to completion. The book emphasizes project management during the beginning stages of project development to influence the quality, cost, and schedule of a project as early in the process as possible. Featuring an all-new chapter on risk management, the third edition also includes new sections on:

Ensuring project quality, The owner's team, Parametric estimating, Importance of the estimator, Formats for work breakdown structures, Design work packages, Benefits of planning, Calculations to verify schedules and cost distributions, Common problems in managing design, Build-operate-transfer delivery methods Based on the author's decades of experience in working with hundreds of project managers, this essential resource includes many new real-world examples and updated sample problems -- page 4 of cover.

Those involved in construction have to cope with so much learning in their own discipline that they shun further involvement in subjects such as insurance and law which in themselves are so deeply and intensely complex. However, insurance and law are interwoven in the basic procedures used in the construction industry for undertaking work, be they design, construction, supervision or operation, or any combination of them. This thoroughly revised edition of Nael Bunni's successful book, formerly called Insurance in Construction, provides information on risk, construction law and construction insurance for those involved with all aspects of construction.

The chapters on risk have been expanded to include recent developments in the area and provide further examples of events which could occur on what can be viewed as the most risky human work activity, namely construction. New chapters are also added to deal with the insurance clauses of the many new standard forms of contract published in recent years, including FIDIC's new suite of contracts published in September 1999, ICE's seventh edition of the civil engineering standard form of contract, and ICE's second edition of the design/build form.
