A Portrait of the Artist as a Young Cat is a book of more than 20 influential artists reimagined as artistic felines. From Frida Catlo to Yayoi Catsama, Wassily Catdinski to Henri Catisse, each portrait of the artist as a young cat is accompanied by a clever tongue-in-cheek biography revealing the thrilling feline lives (all nine) behind their famed artwork. Loaded with clever cat puns, this playful romp through art history will twist the whiskers of any cat-loving creative, whether you're discovering the inspiration for Frida Catlo's renowned self-pawtraits to reflecting on the catmosphere that gave rise to Georgia O'Kitty's landscapes.

- Features fantastic feline artists such as Mary Catsatt and Meow Weiwei
- A cute and clever book that cat and art lovers alike will love
- Packed with tons of real

biographical info about each artist and plentiful cat puns For cat lovers with an artistic purr-suasion, this is the ultimate celebration of their favorite artists.

- A purrfectly smart and sweet book for cat lovers, art lovers, pun enthusiasts, and those who love them
- Great for those who loved Fat Cat Art by Svetlana Petrova, Cats Galore by Susan Herbert, Of Cats and Men: Profiles of History's Great Cat-Loving Artists, Writers, Thinkers and Statesmen by Sam Kalda

P.S. I Love You More Than Tuna MTV Books
Atlas of Human Body: Central Nervous System and Vascularization is a multidisciplinary approach to the technical coverage of anatomical structures and relationships. It contains surface and 3D dissection images, native and colored cross sectional views made in different planes, MRI comparisons,

demonstrations of cranial nerve origins, distribution of blood vessels by dissection, and systematic presentation of arterial distribution from the precapillary level, using the methyl metacrylate injection and subsequent tissue digestion method. Included throughout are late prenatal (fetal) and early postnatal images to contribute to a better understanding of structure/relationship specificity of differentiation at various developmental intervals (conduits, organs, somatic, or branchial derivatives). Each chapter features clinical correlations providing a unique perspective of side-by-side comparisons of dissection images, magnetic resonance imaging and computed tomography. Created after many years of professional and scientific cooperation between the

authors and their parent institutions, this important resource will serve researchers, students, and doctors in their professional work. - Contains over 700 color photos of ideal anatomical preparations and sections of each part of the body that have been prepared, recorded, and processed by the authors - Covers existing gaps including developmental and prenatal periods, detailed vascular anatomy, and neuro anatomy - Features a comprehensive alphabetical index of structures for ease of use - Features a companion website which contains access to all images within the book

Your Cat: Simple New Secrets to a Longer, Stronger Life Weldon Owen International
More than 200 tips on choosing and caring for your new

feline friend, from North America's largest non-profit pet adoption website. Includes photos! From adoption and care to behavior and communication, this comprehensive guide to cats comes from the experts at Adopt-a-Pet.com, who have spent many years connecting homeless pets to their new families. It covers: Basics: Understand your new kitten or cat, prepare for a new arrival, get the skinny on supplies and toys, and learn everything you need to know to integrate a kitty into your home and

life. Behavior: Get the scoop on breed characteristics, troubleshoot problems, and learn how to communicate with your new friend. Care & Health: Choose a veterinarian, treat common ailments, and keep kitty clean, happy, and safe! With useful tips, wonderful photos, and information that's helpful no matter the breed or age of your cat, The Total Cat Manual gives you the whole kitten caboodle!

Your Older Cat

Candlewick Press

In reproductive medicine, the area of genetics is growing and becoming more

complex, and gynecologists require a better understanding of the field. Novel approaches to women's health include genetic testing of the patients and the embryos, interpretation of the results and adequate targeted treatment. This book is a reference for clinicians and researchers in reproductive medicine. Part I includes a brief background of genetics and epigenetics, probability of disease, the different techniques that are being used today for analysis and genetic counselling. Part II focuses on the analysis of the embryo and the current controversies as well as future concepts. Very relevant content.

Part III comprises different clinical scenarios that clinicians face frequently in practice. The increasing amount of genetic tests available and the growing information that patients handle makes this section a relevant part of the fertility treatment discussion. Part IV concludes with psychological aspects of genetic counselling and the role of the genetic counsellor, and bioethics in human reproduction. Essential reference for clinicians involved in reproductive medicine in combination with the information provided by genetic counsellors Builds foundational knowledge on new genetic tests coming into the

clinical scenario for physicians involved with patients Assembles critically evaluated chapters that cover basic concepts of genetics and epigenetics and the techniques involved to preimplantation genetic testing and the controversies around it, to clinically relevant knowledge covering major reproductive pathologies What Comes After John Wiley & Sons This book examines computer architecture, computability theory, and the history of computers from the perspective of minimalist computing - a framework in which the instruction set consists of a single instruction. This approach is different than that taken in any

other computer architecture text, and it is a bold step. The audience for this book is researchers, computer hardware engineers, software engineers, and systems engineers who are looking for a fresh, unique perspective on computer architecture. Upper division undergraduate students and early graduate students studying computer architecture, computer organization, or embedded systems will also find this book useful. A typical course title might be "Special Topics in Computer Architecture." The organization of the book is as follows. First, the reasons for studying such an "esoteric" subject are given. Then, the history and evolution of instruction sets is

studied with an emphasis on how modern computing has features of one instruction computing. Also, previous computer systems are reviewed to show how their features relate to one instruction computers. Next, the primary forms of one instruction set computing are examined. The theories of computation and of Turing machines are also reviewed to examine the theoretical nature of one instruction computers. Other processor architectures and instruction sets are then mapped into single instructions to illustrate the features of both types of one instruction computers. In doing so, the features of the processor being

mapped are highlighted. adored cats . . . and

instructional photos and drawings throughout Covers every problem from Pediatrics to Geriatrics All cat owners wish that their pets really did have nine lives. Now, with this newly revised and expanded edition of Cat Owner's Home Veterinary Handbook, the one life cats do have can be made longer and happier. Virtually every problem that owners will encounter is dealt with in language that teaches everyone how to cope with and prevent those unpleasant surprises. Part of the cat's mystique is a uniquely curious nature. This innate curiosity can create many dangerous situations and unwelcome consequences. This book, a classic in its

first edition, has been updated to include the very latest solutions to the daily occurrences and special problems in all phases of cat care, including behavior and training. Yes, training! Now, in clear and simple terms, symptoms are identified and thorough instructions are given so that with this book, owners can become the best friends their cats can have in a lifetime. *Science Focus Four* Saqi Books Pamper your pet while you save money by doing it yourself! This book shows you how to build inexpensive, functional accessories to make your home a pet paradise. *DIY Projects for Cats and Dogs* presents 20 simple projects that you can make in just a

weekend, without any advanced skills or special tools. From a cat tree and a hide-away litter box to bowl stands, leash racks, and a Scandinavian bed platform, these stylish structures will take care of your pet's needs while preserving your interior décor. Built and pet-tested by the authors in their own home, each imaginative creation features step-by-step instructions, materials lists, and inspirational color photographs. Inside *DIY Projects for Cats and Dogs* Functional yet stylish furniture and accessories to make for your cat or dog. 20 simple DIY projects that anyone can make in one weekend without special skills. Save money by doing it

yourself with scrap wood, simple materials, and basic tools. Modern, decorative designs let you show your love for your animals while embellishing your home. Step-by-step instructions, materials lists, and inspirational color photographs. Projects include litter boxes, dog house, bowl stands, bed platforms, travel basket, cat tree, leash rack, bedside table cabin, and more.

Transposon tagging can work. Even though most of our understanding about the factors that contribute to a successful tagging experiment has been accumulated from a limited number of

experiments using different transposable elements in different genetic backgrounds, it is still possible to draw some conclusions regarding the best experimental strategies for gene tagging. In our experience, Spm has proved to be a good element for transposon tagging. The frequency of recovering mutable alleles induced by Spm is not significantly different from that for Ac-Ds or for Mu 6 (summarized in Ref. 22) and varies from about 10⁻¹⁰ to 10⁻⁸pm has the unique advantage, however, in that all of the members of this family that have

been examined thus far are homologous to each other at the DNA level. Therefore, by combining molecular analysis with genetic segregation, it is possible to identify and isolate alleles that are due to insertions of either autonomous or nonautonomous Spm elements. There are definite steps one can take to increase the chances of detecting a transposition into the gene of interest. The most important step is to select a genetic background in which the desired phenotype will be easy to screen. If the phenotype is not likely to be mutable, then tester lines should be constructed so as to contain flanking markers that can aid in subsequent segregation analyses.

The Magic of Sleep
Lulu.com

A completely original and funny new take on cats. Doogie Horner, a writer and illustrator, knows just what it is about cats that so obsesses and delights us—their impenetrable personalities, their self-contained quirkiness, the aura of mystery that makes it seem as if they're always up to something that they don't want us to know about. So he

imagines their secret lives for us, in a way that takes the most surprising and whimsical turns. With full-color illustrations and absurdly funny short stories, *Some Very Interesting Cats Perhaps You Weren't Aware Of* is a gallery of 100 impossible cat characters. Like the Alien cat, Xort, who reports back to his planet: "Have trained my humans to feed and pet me. They suspect nothing." Or the Mountain Climber cat, Snowball, who is planning a perilous route up the North

Curtain to Mt. Bookcase. Or *Mystico*, the Magician cat—no one could figure out how he sawed a dog in half. (The answer was simple: He didn't like dogs.) And Hjalmar, the Viking cat, whose motto is "Pillage. Tuna. Plunder. Nap."
Plant Transposable Elements Howell Book House
Protect yourself, your children, your pets, and your home from bugs – without using harsh or toxic chemicals! Herbalist Stephanie Tourles offers 75 simple recipes for safe, effective bug repellents you can make at home from all-natural ingredients.

For protection from mosquitos, ticks, and other biting insects, there are sprays, balms, body oils, and tinctures, with scents ranging from eucalyptus to floral, lemon, vanilla, and woody spice. There are also recipes for pets, such as herbal shampoo, bedding formulas, and flea-and-tick collars and powders. And Tourles includes repellents for the home, such as sachets that repel moths, carpet powders that repel fleas and ants, and essential oil repellents to keep your pantry pest-free. A detailed ingredient dictionary explains the properties of all the herbs, essential oils, and other key ingredients.

grieving a
companion cat,
celebrating the
often-quirky bond
between humans and
felines. Our cats
occupy a unique
space in our
hearts. When
they're gone, the

loss can be devastating, the grief profound. P.S. I Love You More Than Tuna gives us an opportunity to give friends, loved ones, or ourselves tangible comfort during the grieving period, when so many of us feel isolated and misunderstood after a beloved pet dies. The author and illustrator (devoted cat lovers themselves) offer this book as a universal love letter from the felines we've bid goodbye to. It celebrates the special bonds we forge with our four-

legged companions and reminds us that their love for us—and ours for them—need never end.

1,001 Things You Always Wanted To Know About Cats Candlewick Press

A gripping portrait of a teen's struggles through grief and abuse - and the miraculous power of animals to heal us. (Age 14 and up) After her veterinarian dad dies, sixteen-year-old Iris Wight must leave her beloved Maine to live on a North Carolina farm with her hardbitten aunt and a cousin she barely knows. Iris, a vegetarian and animal lover, immediately clashes with Aunt Sue, who mistreats the livestock, spends Iris's small

inheritance, and thinks nothing of striking Iris for the smallest offense. Things come to a head when Iris sets two young goats free to save them from slaughter, and an enraged Aunt Sue orders her brutish son, Book, to beat Iris senseless - a horrific act that lands Book and his mother in jail. Sent to live with an offbeat foster family and their "dooking" ferrets, Iris must find a way to take care of the animals back at the farm, even if it means confronting Aunt Sue. Powerful and deeply moving, this compelling novel affirms the redemptive power of animals and the resilience of the human spirit.
Ecology Basics Simon and Schuster

From bestselling author Dowell comes a "funny and winning" ("Kirkus Reviews") tale of one teen's quest for normalcy--and the much more exciting detours she takes along the way.
