“ The world is ending because of climate change! ” Every day we are bombarded with apocalyptic warnings telling us that if we do not change our ways and dismantle our economies, we will destroy the planet. But what if it is all a cynical hoax perpetrated by power-hungry activists and politicians for their own purposes? In this book, James Wright asks that question, joining a multitude of skeptics who challenge the increasingly hysterical claims of “ climate fanatics ” and the science that supposedly underpins them.

Revealing the mechanics of evolutionary theory, the scientist, engineer and inventor presents a compelling argument for the scientific unviability of creationism and insists that creationism's place in the science classroom is harmful not only to our children, but to the future of the greater world as well.

Just as World War II called an earlier generation to greatness, so the climate crisis is calling today's rising youth to action: to create a better future. In UNSTOPPABLE, Bill Nye crystallizes and expands the message for which he is best known and beloved. That message is that with a combination of optimism and scientific curiosity, all obstacles become opportunities, and the possibilities of our world become limitless. With a scientist's thirst for knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable, depressing problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources. As Bill shares his vision, he debunks some of the most persistent myths and misunderstandings about global warming. When you are done reading, you'll be enlightened and

empowered. Chances are, you'll be smiling, too, ready to join Bill and change the world. In *Unstoppable: Harnessing Science to Change the World*, the New York Times bestselling author of *Undeniable: Evolution and the Science of Creation* and former host of "Bill Nye the Science Guy" issues a new challenge to today's generation: to make a cleaner, more efficient, and happier world. Praise for *UNDENIABLE*: "With his charming, breezy, narrative style, Bill empowers the reader to see the natural world as it is, not as some would wish it to be. He does it right. And, as I expected, he does it best." -Neil deGrasse Tyson, Ph.D, host of *COSMOS* "Bill Nye, 'the Science Guy,' has become a veritable cultural icon....[T]he title of his new book on evolution...[is] 'Undeniable,' because, yes, there are many Americans who still deny what Darwin and other scientists long ago proved." -Frank Bruni, *The New York Times* "With a jaunty bow tie and boyish enthusiasm, Bill Nye the Science Guy has spent decades decoding scientific topics, from germs to volcanoes, for television audiences....In his new book, Nye delights in how [evolution] helps to unlock the mysteries of everything from bumblebees to human origins to our place in the universe." -*National Geographic* "When it comes to Bill Nye, 'Science Guy' doesn't even begin to cover it. When he's not being summoned to act as a voice of reason for news outlets or leading meetings as CEO of the Planetary Society, he is living the life of a best-selling author....His recently published book, 'Undeniable: Evolution and the Science of Creation,' enlightens readers while using a conversational, educational tone. After all, it's his ability to break down even the most complicated topics into bite-size pieces that made him such a hit on his '90s children's show 'Bill Nye, the Science Guy.'" -*The Boston Globe* "Mr. Nye writes briskly and accessibly...[and] makes an eloquent case for evolution." -*The Wall Street Journal* "Because [Bill Nye is] a scientist, he has no doubts that the 'deniers' of evolution are flat wrong. And because he's a performer, his book is fun to read and easy to absorb." -*The Washington Post* "Ignite your inner scientist when Nye, known for delivering geeky intel with clarity and charm, takes on one of society's most hotly debated topics (yes, still)." -*Time Out New York*

In 1971 the U.S. government created the Alaska Native Claims Settlement Act and extinguished Alaska Native aboriginal rights to hunting and fishing—forever changing the way Alaska Natives could be responsible for their way of life. The Alaska Department of Fish and Game and the U.S. Fish and Wildlife Service claimed all wildlife management responsibility and have since told Natives when, where, and how to fish, hunt, and harvest according to colonial management doctrines. We need only look at our current Alaska salmon conditions to see how these management efforts have worked. In *My Side of the River*, agricultural specialist Elias Kelly (Yup'ik) relates how traditional Native subsistence hunting is often unrecognized by government regulations, effectively criminalizing those who practice it. Kelly alternates between personal stories of friends, family, and

community and legal attempts to assimilate Native Alaskans into white U.S. fishing and hunting culture. He also covers landownership, incorporation of Alaska residents, legal erasure of Native identity, and poverty rates among Native Alaskans. In this memoir of personal and public history, Kelly illuminates the impact of government regulations on traditional life and resource conservation.

"Evolution is one of the most powerful and important ideas ever developed in the history of science. Every question it raises leads to new answers, new discoveries, and new smarter questions. The science of evolution is as expansive as nature itself. It is also the most meaningful creation story that humans have ever found."—Bill Nye Sparked by a controversial debate in February 2014, Bill Nye has set off on an energetic campaign to spread awareness of evolution and the powerful way it shapes our lives. In *Undeniable: Evolution and the Science of Creation*, he explains why race does not really exist; evaluates the true promise and peril of genetically modified food; reveals how new species are born, in a dog kennel and in a London subway; takes a stroll through 4.5 billion years of time; and explores the

new search for alien life, including aliens right here on Earth. With infectious enthusiasm, Bill Nye shows that evolution is much more than a rebuttal to creationism; it is an essential way to understand how nature works—and to change the world. It might also help you get a date on a Saturday night.

Proposes the pragmatic changes we must make to survive COVID and the worst of the new diseases on the horizon The Trump administration's neglect and incompetence helped put half-a-million Americans in the ground, dead from COVID-19. Joe Biden was elected president in part on the promise of setting us on a science-driven course correction, but, a little more than a year later, another half-a-million Americans were killed by the virus. What happened? In *The Fault in Our SARS*, evolutionary epidemiologist Rob Wallace catalogs the Biden administration's failures in controlling the outbreak. He also shows that, beyond matters of specific political persona

or party, it was a decades-long structural decline associated with putting profits ahead of people that gutted U.S. public health. COVID-19 isn't just an American tragedy. Each in its own way, countries around the world following the "profit-first" model failed their people. Global vaccination campaigns were bottled up by efforts to protect pharmaceutical companies' intellectual property rights. Economies were treated as somehow more real than the people and ecologies upon which they depend. Frustrated populations pushed back against lockdowns, abuses of governmental trust, and, fair or not, the very concept of public health. A social rot meanwhile wended its way into the heart of the sciences that, tasked with controlling disease, serve the systems that helped bring about COVID-19 in the first place. In *The Fault in Our SARS*, Wallace and an array of invited contributors aim to strip down the capitalist social psychology that in effect protected the SARS virus. The team proposes instead new approaches in health and ecology that appeal both to humanity's highest ideals and the pragmatic changes we must make to survive COVID and the worst of the new diseases on the horizon.

In the New York Times bestseller *Everything All at Once*, Bill Nye shows you how thinking like a nerd

is the key to changing yourself and the world around you. Everyone has an inner nerd just waiting to be awakened by the right passion. In *Everything All at Once*, Bill Nye will help you find yours. With his call to arms, he wants you to examine every detail of the most difficult problems that look unsolvable—that is, until you find the solution. Bill shows you how to develop critical thinking skills and create change, using his "everything all at once" approach that leaves no stone unturned. Whether addressing climate change, the future of our society as a whole, or personal success, or stripping away the mystery of fire walking, there are certain strategies that get results: looking at the world with relentless curiosity, being driven by a desire for a better future, and being willing to take the actions needed to make change happen. He shares how he came to create this approach—starting with his Boy Scout training (it turns out that a practical understanding of science and engineering is immensely helpful in a capsizing canoe) and moving through the lessons he learned as a full-time engineer at Boeing, a stand-up comedian, CEO of The Planetary Society, and, of course, as Bill Nye The Science Guy. This is the story of how Bill Nye became Bill Nye and how he became a champion of change and an advocate of science. It's how he became The Science Guy. Bill teaches us that we have the power to make real change. Join him in... dare we say it... changing the world.

These simple math secrets and live debate on February 4, 2014, "Bill Nye, the Science Guy" squared off with Answers in Genesis founder and president Ken Ham. This event echoed the worldviews at work in our lives today and put two of the most unique and recognizable advocates of their positions on the same stage to face not only each other, but the many who watched. More answers, more perspectives, more truth to answer the world's most critical question: How did we and all we know come to be here, at this place and this time in the history of the universe? Are we accidental products of evolution or the centerpiece of God's marvelous creation? Great news for multitasking middle school teachers: Science educators Terry Shiverdecker and Jessica Fries-Gaither can help you blend inquiry-based science and literacy instruction to support student learning and maximize your time. Several unique features make *Inquiring Scientists*, *Inquiring Readers in Middle School* a valuable resource: • Lessons integrate all aspects of literacy—reading, writing, speaking, listening, and viewing. The texts are relevant nonfiction, including trade books, newspaper and magazine articles, online material, infographics, and even videos. • A learning-cycle framework helps students deepen their understanding with data collection and analysis before reading about

a concept. • Ten investigations support current standards and encompass life, physical, and Earth and space sciences. Units range from "Chemistry, Toys, and Accidental Inventions" to "Thermal Energy: An Ice Cube's Kryptonite!" • The authors have made sure the book is teacher-friendly. Each unit comes with scientific background, a list of common misconceptions, an annotated text list, safety considerations, differentiation strategies, reproducible student pages, and assessments. This middle school resource is a follow-up to the authors' award-winning *Inquiring Scientists*, *Inquiring Readers for grades 3-5*, which one reviewer called "very thorough, and any science teacher's dream to read." The book will change the way you think about engaging your students in science and literacy.
