Biochemistry | Definition of Biochemistry at Dictionary.com

Biochemistry is the application of chemistry to the study of biological processes at the cellular and molecular level. It emerged as a distinct discipline around the beginning of the 20th century when scientists combined chemistry, physiology, and biology to investigate the chemistry of living systems. The study of life in its chemical processes

Biochemistry - Biology LibreTexts

Biochemistry is one of the crossover fields of chemistry. Biochemists have to understand both the living world and the chemical world. Even if you don't want to become a biochemist, you'll still have to understand atoms and molecules as a biologist. You'll also have to know about organic chemistry; a much bigger area of chemistry.

[What is Biochemistry? | Biochemistry - McGill University](#)

Biochemistry definition is - chemistry that deals with the chemical compounds and processes occurring in organisms. How to use biochemistry in a sentence.

Biochemistry - American Chemical Society

Like other sciences, biochemistry aims at quantifying, or measuring, results, sometimes with sophisticated instrumentation. The earliest approach to a study of the events in a living organism was an analysis of the materials entering an organism (foods, oxygen) and those leaving (excretion products, carbon dioxide).

What Is Biochemistry? - Introduction and Overview

Biochemistry or biological chemistry, is the study of chemical processes

within and relating to living organisms. A sub-discipline of both biology and chemistry, biochemistry may be divided into three fields: structural biology, enzymology and metabolism.
