Il volume, pubblicato nell'ambito delle celebrazioni per il 450° anniversario della morte di Michelangelo (Caprese Michelangelo, 1475 - Roma, 1564) offre un interessante percorso per comprendere l'influenza di Michelangelo nelle arti visive, nell'architettura e nel design nel corso del Novecento. Attraverso numerosi saggi critici, viene illustrato il progressivo abbandono della retorica fiorita attorno all'artista fino agli anni quaranta, improntata a un eroico titanismo, sottolineando come il linguaggio di Michelangelo abbia assunto man mano un significato esistenziale, offrendosi anche come esempio formale per la politica della ricostruzione, fino a riacquistare lo status di un vero e proprio mito nazionale a ridosso dei festeggiamenti per il centenario dell'unificazione italiana. In questo contesto, il volume da conto delle celebrazioni che si svolsero nel 1964 e nel 1975 in occasione dei centenari michelangeloeschi, e i dei restauri che portarono al rifiorire di Casa Buonarroti. Accanto a una scelta di disegni di Michelangelo, e presentata una ricca selezione di opere di artisti del Novecento e contemporanei. Completa il volume una bibliografia aggiornata.

Oxidative stress is the result of an imbalance in pro-oxidant/antioxidant homeostasis that leads to the generation of toxic reactive oxygen species. Brain cells are continuously exposed to reactive oxygen species generated by oxidative metabolism, and in certain pathological conditions defense mechanisms against oxygen radicals may be weakened and/or overwhelmed. DNA is a potential target for oxidative damage, and genomic damage can contribute to neurodegeneration. It is important therefore to identify tools for the quantitative analysis of DNA damage in models on neurological disorders. This book presents detailed information on various neurodegenerative disorders and their connection with oxidative stress. This information will provide clinicians with directions to treat these disorders with appropriate therapy and is also of vital importance for the drug industries for the design of new drugs for treatment of degenerative disorders. * Contains the latest information on the subject of neurodegenerative disorders * Reflects on various factors involved in degeneration and gives suggestions for how to tackle these problems

Amino Acids and Peptides in the Nervous System

In Free Radical and Antioxidant Protocols, seventy-six leading international authorities describe cutting-edge methodologies for quantifying free radical and antioxidant analytes in tissue and body fluids using experimental models and in vitro procedures. These user-friendly and easily reproducible techniques cover the essential tasks, including radical generating systems, direct measurement or trapping of reactive radical species and acute-phase proteins, and measurement of metabolic intermediates derived from the oxidation of lipids, proteins, and nucleic acids. There are also methods for the determination of vitamin, enzymatic, and water-soluble antioxidants, as well as of essential micronutrients and cofactors. The techniques take advantage of new instrumentation-probes, photon counting, chemiluminescence, and caged compounds, with an emphasis on HPLC-and are adaptable to a wide range of applications. Free Radical and Antioxidant Protocols provides state-of-the-art methodology and biotechnology in a convenient format for both academic and corporate biomedical scientists. The detailed, laboratory-tested free-radical assays, many of them presented here for the first time, will illuminate the study of both primary and secondary oxidative stress and contribute significantly to our understanding of the many disorders associated with this process.

We're all just animals after all. Before the beekeeper arrived, the Crimson Quays was just a well-appointed tourist trap: a luxury travel resort replete with swimming pools, musical performances, and amusement park rides. However, the resort's crowning glory--the very feature that drew the beekeeper to the island in the first place--was the zoo. Although the beekeeper, a biologist by trade, was tasked with the construction of the zoo, he was rarely spotted at resort events. Instead, he spent his evenings chasing other zoological pursuits--specifically, he was attempting to crossbreed a new species of wolf that would thrive in the resort's arid climate. The beekeeper's odd behaviour went mostly unnoticed... until the night the animals got out. Originally published in Globus Magazine as a serial comic, Crimson Quays was written by travel journalist Jonathan Bousfield and illustrated by celebrated comic artist Igor Haufbauer, creator of the Alcuin Society Award-winning Mister Morgen. In Crimson Quays, Bousfield and Haufbauer reveal a nightmarish tale of human manipulation gone very, very awry.
