Biology Chapter 16 - Evolution Flashcards  
| Quizlet

Evolution is the process of adaptation through mutation which allows more desirable characteristics to pass to the next generation. Over time, organisms evolve more characteristics that are beneficial to their survival. For living organisms to adapt and change to environmental

pressures, genetic variation must be present.

Summary Campbell Biology - Chapter 16, 17 - StuDocu

The chapter begins with a brief summary of the classical development of evolution, emphasizing the importance of mutations in that process.

Molecular biology has not only clarified the basic mechanisms of evolution but also provided a new, more rational approach to phylogenetic classification.
